

CASE STUDY / ENDPOINT SOLUTION DESIGN

Business endpoints. Controlled deployment. Structured support.

INEOS Styrolution India Limited

Dell Latitude 5420
Supply planning, configuration & user handover

A practical design for a consistent laptop build, secure access, user migration and support ownership.

SOLUTION DESIGN | ORDER STATUS REVIEW

Reference PO 4500530295 | 31 March 2022

Project context | Requirement and source boundaries

The supplied record concerns Dell Latitude 5420 laptops for INEOS Styrolution India Limited at its Vadodara office. This case study describes a D-TECH solution approach for a controlled endpoint rollout, from asset verification to user acceptance and ongoing support.

Reference	Documented fact	Implication for this case study
CLIENT / LOCATION	INEOS Styrolution India Limited; 5th Floor, OHM House-II, OHM Business Park, Subhanpura, Vadodara 390023.	The PO location is an office delivery address. The plant photo is supplied visual context.
PO / MODEL	Changed PO 4500530295 dated 31 March 2022; item 10, Dell Latitude 5420; quantity shown: 15.	Model and historic quantity are reference details, not evidence of delivery.
ORDER STATUS	Item Deleted / Position Deleted; net total excluding tax: INR 0.00.	This changed PO does not establish an active supply commitment or completed deployment.
SUPPLIER / SCOPE	Vendor named in PO: Dell International Services India. No D-TECH installation or AMC line is shown.	D-TECH activities below are a proposed delivery methodology, subject to agreed scope.
CONFIGURATION	CPU, RAM, SSD, operating system and warranty terms are not itemised on the supplied product line.	Approve the final device configuration and entitlement before procurement / build.

Solution architecture | Endpoint access and management

Solid blue: user access | Dashed green: recovery / support workflow. Diagram is a design illustration, not an as-built network map.

Implementation | Detailed endpoint build sequence

Step	Execution detail	Required evidence
01 APPROVE	Confirm active order, final configuration, OS entitlement, user list, software licences and installation scope.	Approved BOM, owner and rollout plan.
02 RECEIVE	Inspect packaging and device condition. Match carton, chassis and firmware Service Tag records; record accessories.	Asset / serial register and discrepancy log.
03 BASELINE	Use approved licensed OS media; select drivers for the exact device. Record BIOS / driver baseline and run hardware checks.	OS activation, device health and build record.
04 SECURE	Apply customer access policy, named admin ownership, endpoint protection and approved encryption with recovery-key custody.	Policy / agent status and authorised key storage.
05 CONNECT	Configure approved LAN / Wi-Fi and identity enrolment. Verify DNS, time, required application access and restricted privileges.	Connectivity and role-based access test results.
06 PILOT / SCALE	Test one pilot device; correct issues and freeze the build. Deploy approved batches with individual asset-to-user mapping.	Pilot approval, batch checklist and user receipts.

Recommended method only. Actual build settings, device configuration and completion dates require approved project records.

Acceptance | User migration, testing and closeout

If existing user data is in scope, identify authorised folders, application dependencies and cutover timing with the customer. Back up before transfer, verify the destination and retain the source until acceptance. Do not move shared credentials or unapproved applications.

Test area	Acceptance record
DEVICE / BUILD	Service Tag and user mapping; hardware checks; licensed OS; driver status and approved patch baseline.
USER EXPERIENCE	Login, approved LAN / Wi-Fi, required applications, email, file access and any agreed peripherals.
SECURITY / RECOVERY	Customer policy applied; restricted admin access; recovery-key custody if encryption enabled; restore test if backup in scope.
CLOSEOUT	Exceptions resolved or accepted; asset receipt signed; configuration record and agreed support route handed over.

Expected benefits: consistent builds, clearer asset ownership and traceable support. No measured performance or completed outcome is asserted.

Lifecycle support | Ownership, escalation and handover

Owner	Responsibility within agreed scope
CUSTOMER IT	Approve identity, policies, software, network access, data retention and user acceptance; retain ownership of privileged access.
D-TECH PROPOSED	Coordinate approved build, asset records, deployment checks, troubleshooting and customer communication.
OEM / AUTHORISED CHANNEL	Verify device entitlement by Service Tag; process covered hardware issues according to the actual support contract.
USER / SERVICE DESK	Report the asset ID, symptom, impact and contact details; confirm restoration and ticket closure.

HANDOVER PACK

Approved order / scope, device inventory, user mapping, build checklist, test records, licences, support entitlement and open exceptions.

D-TECH | CUSTOMER SUPPORT

support.dtechindia.com | [Raise ticket ↗](#)

+91 99989 03042

Ticket → Triage → Diagnosis → Agreed escalation → Resolution → Customer closure

SLA response targets, service hours, onsite coverage and AMC duration must be agreed in the service contract.

Source: supplied changed PO and company photographs. Dell device reference: support and documentation.

Status: solution design. The supplied deleted order line does not verify D-TECH supply, installation, support tenure or delivery completion.
