

CUSTOMER LIFECYCLE SUCCESS | CASE STUDY

From Greenfield Infrastructure to More Than 12 Years of FMS Partnership

Bostik India - Jhagadia Manufacturing Site

BUILD | COMMISSION | SUPPORT | IMPROVE

THE RELATIONSHIP STORY

D-TECH first established the plant's fibre, copper, Cisco Layer-3 and EPABX foundation, then remained accountable for long-term IT Facility Management Services. A 2025 support-contract renewal provides current documentary evidence of that continuity.

12+

years FMS support

infrastructure completion

D-TECH SOLUTION INTEGRATORS PVT. LTD.

Lead with Trust. Inspire with Vision.

THE DEFINING PROOF POINT

The infrastructure project ended. The partnership did not.

What began as an urgent greenfield infrastructure assignment evolved into a long-standing FMS relationship. D-TECH remained connected to the environment it designed and commissioned, creating continuity between project knowledge, daily support and future requirements.

12+

years of FMS continuity

2025

support renewal evidenced

4

lifecycle stages

1

accountable partner

Why this relationship stands out

BUILT FROM DAY ONE

D-TECH surveyed, designed and delivered the original plant-wide network and EPABX foundation.

KNOWLEDGE RETAINED

The support team inherits context from the original infrastructure instead of rediscovering the environment.

SUPPORT CONTINUITY

Annual IT support renewal demonstrates a service relationship extending well beyond project handover.

LIFECYCLE OWNERSHIP

One partner remains accountable across build, commission, operate and continuous-improvement stages.

CUSTOMER-SUCCESS PRINCIPLE

The strongest infrastructure outcome is not only successful commissioning. It is an environment that remains supportable, understood and trusted years after go-live.

FROM PROJECT TO PARTNERSHIP

Four stages of sustained technology ownership

D-TECH's involvement follows the full operational lifecycle: establish a reliable foundation, place it into service, retain technical context through FMS and use that knowledge to support evolving business needs.

01

BUILD

Greenfield survey, bill of material, fibre and copper backbone, Cisco Layer-3 network and EPABX delivery.

02

COMMISSION

OEM coordination, rapid mobilisation, installation and recorded completion within the required project window.

03

OPERATE

Transition from one-time project activity into ongoing IT Facility Management Services for the plant.

04

EVOLVE

Long-term familiarity supports faster understanding of incidents, changes and future infrastructure requirements.

PROJECT KNOWLEDGE BECOMES SERVICE INTELLIGENCE

The handover gap is reduced because the same partner understands why the infrastructure was designed, how it was implemented and where operational dependencies sit.

ORIGINAL GREENFIELD ENGAGEMENT

A communications backbone designed as one system

The initial assignment established the plant's core communication environment through coordinated passive, active and voice workstreams. The project record identifies rapid mobilisation and a one-month completion window.

Execution strengths

SPEED

Installation mobilisation recorded within one week of order receipt.

COORDINATION

Fibre, copper, active networking and telephony managed through one structure.

ACCOUNTABILITY

One partner coordinated survey, sourcing, installation and commissioning.

SUPPORTABILITY

The delivered foundation was structured to remain maintainable after project closure.

LONG-TERM SERVICE CONTINUITY

Turning infrastructure knowledge into dependable plant support

After commissioning, D-TECH's role extended into IT FMS support. The operating model below shows how long-term technical familiarity can be converted into disciplined service, coordination and continuous infrastructure care.

USER & INCIDENT SUPPORT

Receive issues, establish context, diagnose and coordinate resolution through a defined support path.

INFRASTRUCTURE CARE

Maintain awareness of network, connectivity and plant technology dependencies created during the original project.

PREVENTIVE ATTENTION

Use environment familiarity to identify recurring risks and support planned maintenance activities.

OEM / VENDOR COORDINATION

Escalate product-specific issues while retaining one customer-facing point of accountability.

CHANGE SUPPORT

Assess new requirements against the existing environment before implementing additions or modifications.

SERVICE GOVERNANCE

Support renewal, ownership clarity, reporting discipline and ongoing engagement with site stakeholders.

CONTINUITY ADVANTAGE

Fewer knowledge handoffs | stronger asset context | practical troubleshooting | consistent customer ownership | smoother evolution from old infrastructure to new requirements

PARTNERSHIP OUTCOMES

Why 12+ years of support matters

Longevity is meaningful when it preserves knowledge and improves accountability. The benefits below are capability-based outcomes of the relationship; the supplied records do not include measured SLA, uptime or ROI data.

12+ YEARS OF FMS SUPPORT

after completion of the original infrastructure project

INFRASTRUCTURE GO-LIVE

CONTINUING SERVICE RELATIONSHIP

INSTITUTIONAL MEMORY

Knowledge of the original architecture reduces dependence on repeated rediscovery.

FASTER CONTEXT

A familiar support partner can begin diagnosis with stronger understanding of site dependencies.

CLEAR OWNERSHIP

The customer retains one accountable relationship across infrastructure and ongoing support.

CHANGE CONFIDENCE

New requirements can be assessed against a known technical foundation and operating history.

RELATIONSHIP TRUST

Repeated annual support engagement demonstrates continuity beyond a one-time transaction.

LIFECYCLE VALUE

Project delivery and managed support reinforce each other across the technology lifecycle.

CURRENT RENEWAL PROOF

A documented 2025 support renewal within a 12+ year relationship

The supplied purchase order confirms renewal of the IT Support Contract for Bostik's Jhagadia site. The order is used here as documentary evidence of ongoing support, without reproducing the commercial order page.
