

CISCO NETWORK & WIRELESS AMC | INDUSTRIAL CONNECTIVITY

Protecting Industrial Connectivity at L&T; MHI Boilers, Hazira

A comprehensive D-TECH maintenance program for the Cisco switching and wireless infrastructure supporting a major boiler manufacturing complex.

CLIENT: L&T-MHI BOILERS PRIVATE LIMITED

HAZIRA | SURAT | GUJARAT

COVERED ESTATE

52 Devices

SWITCHING

41 Switches

WIRELESS

10 Access Points

WLAN CONTROL

1 Controller

VERIFIED PO: LMB/H45/23000-19887/KSR | 18 APRIL 2014

Cisco switches and wireless-device AMC | Commercial value omitted

01 | BUSINESS CONTEXT

A Mixed Cisco Industrial Network Estate

Maintaining wired and wireless availability across a manufacturing complex

The Hazira environment combined core, distribution and access-layer switching with centralized wireless control and industrial access points. Different Cisco platforms, port densities, uplink types and support dates had to be governed under one accountable maintenance framework.

TECHNOLOGY DIVERSITY

Catalyst 4500, 2350, 2960, 3560 and 3750 platforms operated alongside a Cisco wireless LAN controller and unified access points.

INDUSTRIAL DEPENDENCY

Production users and business systems depended on stable access, switching continuity and reliable wireless connectivity at Hazira.

What the contract required

- Comprehensive AMC for the listed Cisco switches, controller and wireless access points.
- Back-to-back technical support from Cisco for the covered device estate.
- Four scheduled preventive-maintenance visits during the year.
- Firmware upgrades performed by D-TECH engineering resources.
- Device-level identification through serial number and service coverage records.
- Service delivery at the L&T-MHI; Boilers Hazira Manufacturing Complex.

NETWORK MANDATE

Keep a mixed Cisco estate supportable through OEM alignment, planned maintenance, current firmware and disciplined asset-level coverage.

02 | COVERED INFRASTRUCTURE

A 52-Device Cisco Support Portfolio

Coverage from core chassis to plant-floor wireless access

01 Core Switching

1 Cisco Catalyst 4507R-E modular, redundant-supervisor-capable core chassis.

02 High-Density Access

14 Catalyst 2350 48-port Gigabit switches with 10-Gigabit uplink capability.

03 Campus Access

22 Catalyst 2960-series switches across 8-, 24- and 48-port configurations.

04 Distribution & Fiber

3 Catalyst 3560E switches and 1 Catalyst 3750G 12-port SFP platform.

05 Wireless Infrastructure

10 Cisco Aironet LAP1252 dual-band unified wireless access points.

06 Central WLAN Control

1 Cisco 4402 wireless LAN controller governing the covered wireless estate.

OEM-BACKED ASSURANCE

Cisco back-to-back support + D-TECH engineering ownership + scheduled preventive maintenance + firmware currency

03 | SERVICE VALUE

One Year of Structured Cisco Care

A one-year AMC framework built around visibility, prevention and OEM alignment

D-TECH brought the complete 52-device estate into one support model, combining asset-level service records, quarterly preventive attention, firmware management and Cisco-backed escalation. The result was a clearer operating framework for a diverse industrial network at Hazira.

01 Unified Accountability

One AMC framework covering core, distribution, access and wireless infrastructure.

02 Preventive Discipline

Four planned maintenance visits to identify risks before they became outages.

03 Technology Currency

Firmware upgrades included as a defined D-TECH engineering responsibility.

04 OEM Alignment

Cisco back-to-back support embedded within the service-delivery model.

D-TECH EXPERIENCE SIGNAL

Industrial network AMC is not only device repair - it is asset visibility, preventive control, firmware discipline and an escalation path backed by the OEM.

Build dependable wired and wireless operations for your enterprise.
