VIDEO CONFERENCING SOLUTION / DAHEJ LNG TERMINAL

Executive Collaboration, Engineered for the Room

A turnkey boardroom VC environment designed, integrated and commissioned to make high-stakes meetings clear, consistent and easy to operate.

DELIVERY MODEL	PROJECT SITE	ORDER REFERENCE
SITC turnkey	Dahej, Gujarat	4500016098

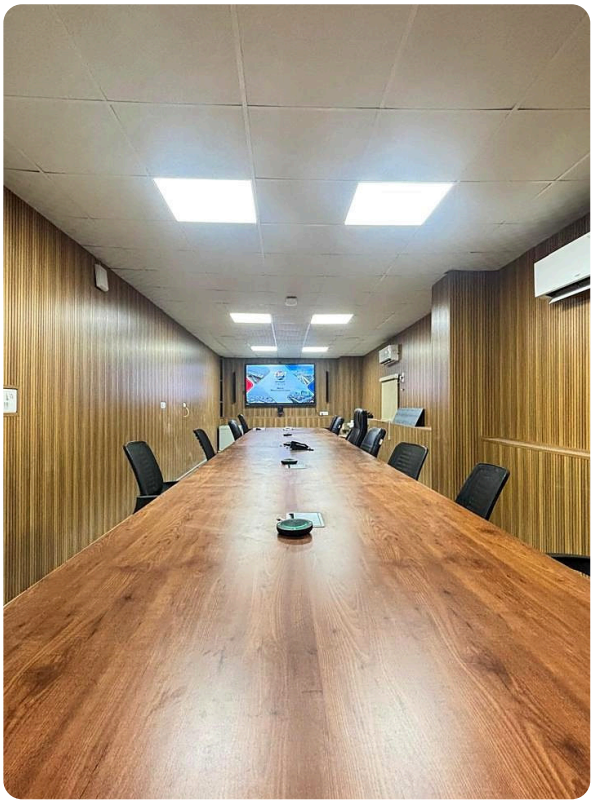

Built around the meeting — not around the equipment.

Integrated display, camera, room audio and distributed tabletop participation points. Documented through installed-site photography and formal customer order evidence.

EXECUTIVE BRIEF

Project at a glance.

Petronet LNG required a complete video conferencing room facility at Dahej LNG Terminal. D-TECH was entrusted with supply, installation, testing and commissioning.

THE MANDATE

One room. One experience.

An executive collaboration environment where participants can see, hear and contribute naturally across the full length of a boardroom table.

ORDER DATE

23 Dec 2025

DOCUMENTED DEADLINE

31 Mar 2026

DEPLOYMENT TYPE

Single VC room

WHAT SUCCESS LOOKS LIKE

Natural participation

Audio pickup and meeting access distributed along the table.

Clear room presence

A large visual surface with centrally aligned camera coverage.

Operational simplicity

A coherent room system for repeatable day-to-day meetings.

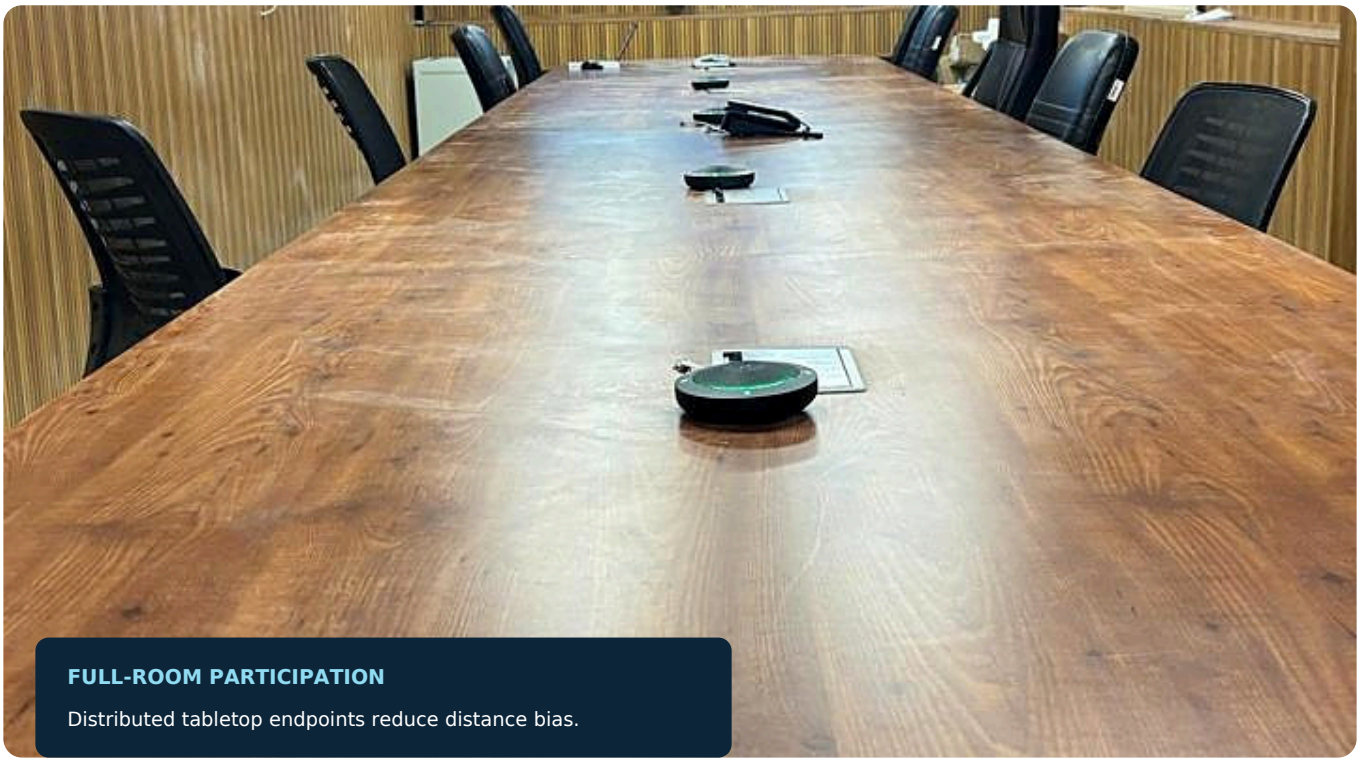

Finished-room integration

Technology positioned within the boardroom architecture.

ROOM DESIGN

Designed for the whole table.

A long boardroom creates a spatial, acoustic and operational challenge: the screen can be visible while audio, camera framing and meeting access become uneven with distance.

FULL-ROOM PARTICIPATION

Distributed tabletop endpoints reduce distance bias.

ROOM DESIGN PRIORITIES

01 Sightlines

A front-of-room visual anchor visible from the complete table.

02 Voice reach

Tabletop points placed throughout the participant zone.

03 Camera alignment

Front-centre placement supports eye-line and room framing.

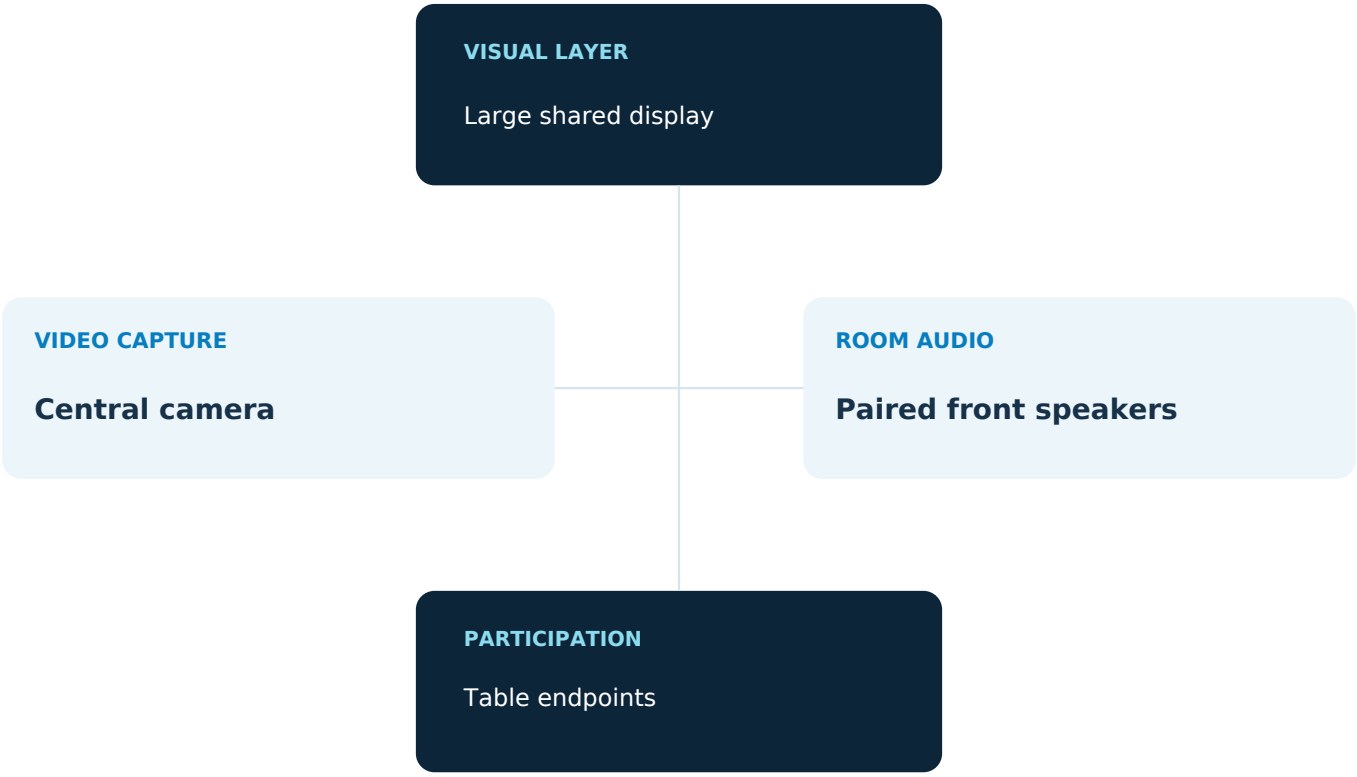

04 Clean integration

Wall-mounted equipment and table connectivity preserve usable space.

SOLUTION ARCHITECTURE

Integrated collaboration stack.

Four coordinated layers support one meeting experience. The installed photographs show a large-format display, a centrally aligned conferencing camera, front-room audio and distributed tabletop devices.

OBSERVED INSTALLED ELEMENTS

Large-format display

Primary visual surface for remote video and content.

Conferencing camera

Mounted centrally beneath the display.

Front-room loudspeakers

Vertical left/right units for room sound.

Tabletop endpoints

Multiple units distributed across seating positions.

Conference console

A central communication/control point is visible.

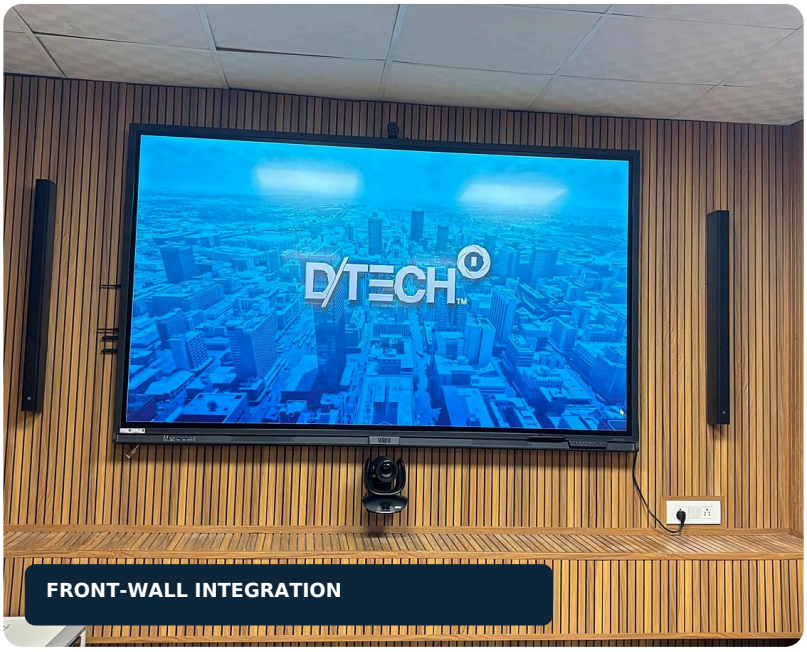

Table connectivity

Flush cable/data access points support user connections.

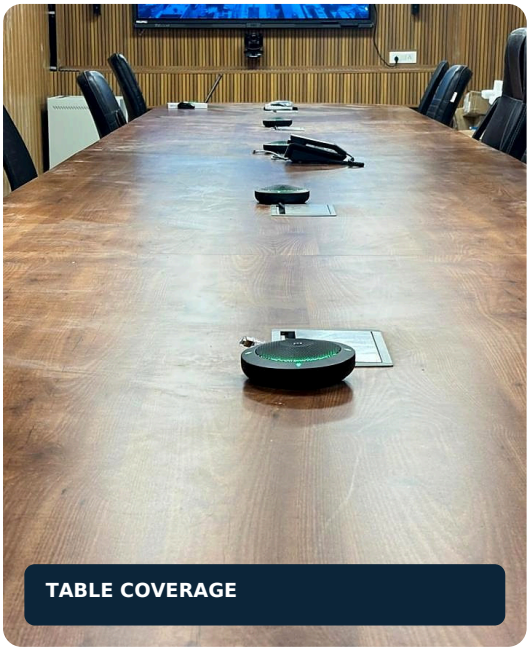

INSTALLED-SITE EVIDENCE

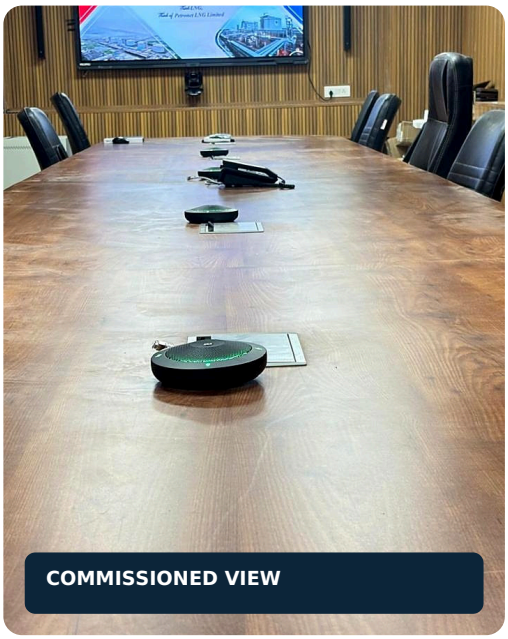

From design to deployed room.

These actual project photographs document the participant view, front wall and room-wide integration. No stock room imagery is used.

FRONT-WALL INTEGRATION

TABLE COVERAGE

COMMISSIONED VIEW

ROOM-WIDE COMPLETION

Actual project photographs supplied for this case study.

TURNKEY DELIVERY

SITC execution framework.

The formal order defines supply, installation, testing and commissioning. The delivery path covers coordinated material supply through an accepted operating room.

01

ROOM READINESS

Validate display wall, table positions, power, data pathways and equipment clearances.

02

SUPPLY & STAGING

Coordinate project materials, packing, identification and delivery to the Dahej site.

03

PHYSICAL INTEGRATION

Mount display, camera and speakers; position table endpoints and route connections.

04

SYSTEM CONFIGURATION

Align video, audio and room behaviour for consistent executive use.

05

TESTING

Verify display, camera view, sound output, tabletop participation and connectivity.

06

COMMISSIONING

Demonstrate the operating room and complete customer acceptance documentation.

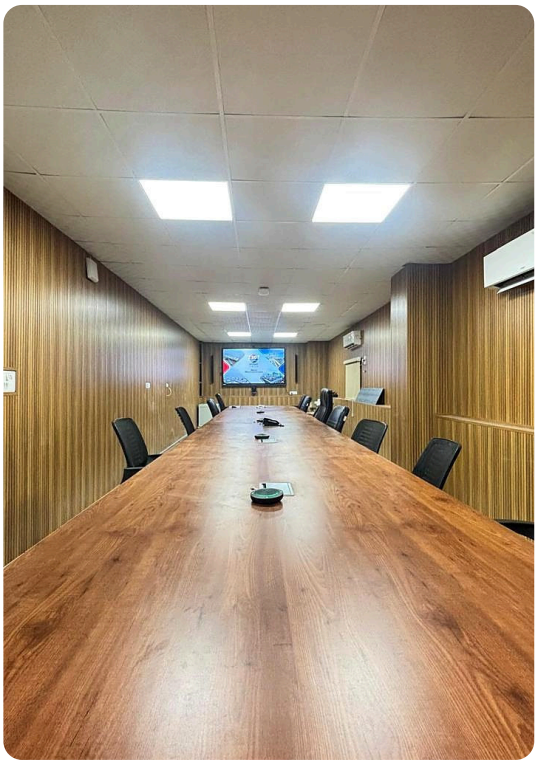

ACCEPTANCE-LED DELIVERY

The order links final completion to installation, testing, commissioning and customer acceptance.

CLIENT PROOF

Why this project matters.

The supplied order and installed-site photographs support a professional boardroom VC deployment at Petronet LNG, Dahej.

ENTERPRISE COLLABORATION OUTCOME

A boardroom ready when the meeting matters.

Visual communication, room audio and participant access form one integrated environment, supporting executive reviews and remote coordination.

SOLUTION MODEL

Turnkey SITC

EVIDENCE BASE

Order + site photos

VALUE DELIVERED TO THE MEETING ENVIRONMENT

Consistent experience

A repeatable front-of-room setup supports regular meetings.

Inclusive participation

Distributed access reaches users seated along the room.

Professional presence

Integrated AV complements the executive interior.

Lifecycle-ready foundation

Structured installation supports future testing and maintenance.

ROOM-AWARE ENGINEERING / DISCIPLINED EXECUTION / CLEAR ACCEPTANCE
