**CONTINUE**

2025-26 orders

A relationship sustained by responsiveness, continuity and practical engineering.

Recent orders demonstrate continued CCTV and network modernization.

Longevity backed by current delivery.

D-TECH has supported Rajashree Polyfil for more than 17 years, with recent purchase orders confirming continued confidence in surveillance and network modernization.

17+

YEARS OF RELATIONSHIP

Sustained technology association based on D-TECH business records.

3

RECENT PURCHASE ORDERS

Orders dated 05-12-2025, 11-12-2025 and 30-01-2026.

18

NEW CAMERA ENDPOINTS

10 bullet cameras and 8 dome cameras across two orders.

2.47 KM

WEATHERPROOF CAT6

Documented outdoor cable across the three orders.

ACTIVE MODERNIZATION

Recent scope includes cameras, NVRs, surveillance storage, Aruba switching, long-range SFPs, outdoor racks, fiber, HDPE protection, junction boxes and mounting hardware.

RELATIONSHIP VALUE

The story is not one transaction. It is repeated confidence that D-TECH understands the site, responds to changing requirements and helps technology evolve without losing continuity.

EVIDENCE BASIS

Three supplied purchase orders support current scope. Commercial pricing and full order pages are intentionally excluded.

Trust that evolves with the technology.

Over a long industrial relationship, the need shifts from individual devices to connected, maintainable systems. D-TECH remains the constant partner across that change.

RELATIONSHIP PRINCIPLE

Know the site. Protect continuity. Modernize with purpose.

Modernize without disrupting operations.

A live industrial site needs better coverage, stronger outdoor connectivity and dependable recording while preserving operational continuity.

MIXED CAMERA REQUIREMENTS

Bullet and dome formats are needed for different viewing angles, distances and environmental conditions.

OUTDOOR EXPOSURE

Weatherproof cabling, sealed junction boxes, pole mounting and outdoor racks are required for reliable field operation.

DISTRIBUTED NETWORK

Remote camera points need compact PoE switching and optical uplinks back to the core network.

STORAGE & RETENTION

Higher-resolution recording increases NVR and surveillance-drive capacity requirements.

PHASED EXPANSION

Separate projects must connect into one coherent architecture rather than create isolated islands.

LIFECYCLE CONTROL

Long-term operation depends on asset records, labeling, health checks, spares and planned refresh.

THE OPERATING QUESTION

How can each new requirement improve the present system while protecting a 17+ year relationship and the client's existing technology investment?

A repeatable field-to-control-room design.

D-TECH structures each expansion around a consistent chain: camera, protected field termination, edge switching, backbone, recording and authorized monitoring.

COPPER EDGE

Weatherproof CAT6 connects local cameras to outdoor racks and compact PoE access switching.

OPTICAL UPLINK

Long-range single-mode SFPs and six-core outside-plant fiber support remote network extension.

CENTRAL RECORDING

NVRs and dedicated surveillance drives consolidate streams, retention and playback.

CONTROL & SUPPORT

Documented identities, access rights and service ownership turn equipment into an operational system.

Three orders, one continuing roadmap.

The latest orders reinforce a common platform of cameras, network access, recording and protected outdoor infrastructure.

CAMERAS	10 bullet + 8 dome	18 endpoints across two expansion orders
RECORDING	3 NVRs	Two 16-channel systems plus one DS9600-series reference
STORAGE	44 TB raw	Six 6 TB drives plus two 4 TB drives
SWITCHING	4 Aruba switches	Three compact 8G switches plus one 24G switch
OPTICAL	4 long-range SFPs	1G LC LX single-mode uplinks; additional OSP fiber in Jan 2026 order
OUTDOOR CAT6	2,470 metres	Weatherproof double-coated UTP across the three orders
FIELD HARDWARE	12 JBs + 13 stands	Weatherproof terminations and pole-mounting support
PROTECTION	600 m HDPE + clamps	Route protection and fixing hardware in the Jan 2026 order

Recent orders demonstrate an active relationship, not a historical claim.

The building blocks of the current platform.

Conceptual line drawings communicate solution roles. Product dimensions and final installation details follow approved OEM and site drawings.

4 MP BULLET CAMERA

10 nos | Outdoor field views

4 MP DOME CAMERA

8 nos | Vandal-resistant coverage

ARUBA ACCESS SWITCH

4 nos | PoE and uplink edge

NVR & STORAGE

3 NVRs | 44 TB raw drives

OUTDOOR 6U RACK

2 nos | Protected edge equipment

CAT6 / FIBER PATH

Outdoor copper and optical route

FIELD SUPPORT

Weatherproof junction boxes, pole-mounting stands, HDPE pipe and stainless-steel clamps complete the field route.

Survey, integrate, verify and sustain.

Long-term trust is protected through disciplined execution and clear ownership at every stage.

RELATIONSHIP CONTROL

Every new project should strengthen the common platform, documentation and support model.

Recent orders show repeat confidence.

Three orders within eight weeks demonstrate a continuing cycle of CCTV expansion, network strengthening and storage improvement.

05 DEC 2025

4500086959

PO 4500086959

8 bullet + 3 dome cameras, Aruba 8G switch, SFP, outdoor 6U rack, 610 m CAT6, 16-channel NVR, four 6 TB drives, junction boxes and mounting stands.

11 DEC 2025

4500087130

PO 4500087130

2 bullet + 5 dome cameras, two Aruba 8G switches, three long-range SFPs, outdoor rack, 1,000 m CAT6, 16-channel NVR, two 6 TB drives, junction boxes and stands.

30 JAN 2026

4500088522

PO 4500088522

Aruba 24G switch, DS9600-series NVR reference, two 4 TB drives, 860 m CAT6, 600 m HDPE pipe, six-core OS2 outside-plant cable and stainless-steel clamps.

ORDER PATTERN

Expansion is phased, but each order contributes to one larger surveillance and network roadmap.

What a long relationship makes possible.

Longevity creates value when experience reduces friction, protects continuity and makes each new investment fit the operating environment.

FASTER UNDERSTANDING

Site familiarity shortens discovery and helps teams focus on the real requirement.

LOWER CHANGE RISK

New camera, network and storage additions can be aligned with existing operations.

CONSISTENT SUPPORT

A known escalation path reduces uncertainty during faults, upgrades and urgent needs.

PHASED INVESTMENT

The client can modernize in practical stages without replacing the complete environment at once.

BETTER STANDARDIZATION

Repeated delivery supports common equipment, documentation, labeling and spares.

FUTURE READINESS

Switching, optical uplinks, racks and cable protection create a platform for further expansion.

THE RESULT

More than 17 years of relationship has developed into a practical lifecycle partnership - understand, deliver, support, modernize and continue.

RELATIONSHIP CASE STUDY

Technology changes. Trust keeps moving forward.

17+
YEARS

CONTINUITY

A partner who understands the history and the current operating reality.

MODERNIZATION

Recent CCTV, network, storage and outdoor-infrastructure upgrades.

ACCOUNTABILITY

One D-TECH team coordinating products, integration and ongoing support.

NEXT CHAPTER

Health checks, AMC, phased refresh and future security expansion.

MORE THAN 17 YEARS OF TRUST. READY FOR THE NEXT TECHNOLOGY CHAPTER.
