VISITOR MANAGEMENT / TWO-LOCATION PROJECT

One visitor journey. Two ADAMA locations.

Supply and installation scope for Dahej Plant and Hyderabad Headquarters.

A controlled welcome. A traceable visit.

D-TECH brings the ordered visitor-management scope into a clear operating model for plant security, reception and employee hosts.

02 LOCATIONS	Dahej Plant + Hyderabad HQ
35 HOST USERS	Bundle limit in the service order
30 VISITORS	Bundle wording; metric to confirm

Concept illustration of plant entry and office reception; not ADAMA site photography.

01 / DOCUMENTED ENGAGEMENT

A defined scope for both locations

Source: ADAMA Service Order 400000180, document date 25 March 2026; order issued 27 March 2026.

Order element	Documented scope
Customer and provider	ADAMA India Pvt Limited / D-Tech Solution Integrators Private Limited.
Work package	Supply and installation of Visitor Management System for Dahej Plant and HQ Hyderabad.
License bundle	Host up to 35 users and visitors up to 30 visitors, as stated in the order. No separate site allocation is given.
Dahej delivery address	Plot D-2/Ch-1, GIDC Estate, Dahej, Taluka Vagra, Bharuch, Gujarat 392130.
Commercial scope	INR 98,000 basic + INR 17,640 tax = INR 115,640 total.

How to read this case study

The order establishes the two-site supply and installation engagement. Architecture, operating controls and rollout checks on subsequent pages are the recommended solution approach; completion records and measured outcomes were not supplied.

02 / REFERENCE ARCHITECTURE

Site operations with shared management visibility

Concept design: hosting, network paths, licenses and site access permissions require final confirmation.

Printers, scanners, kiosks, barriers, access-control devices, servers and WAN services are not itemized in this order.

03 / VISITOR WORKFLOW

From invitation to a closed visit record

Reference workflow adapted from published platform capabilities; confirm the installed edition and configuration.

01 Request / invite

Host invites the guest or the visitor submits a request. Capture site, purpose and planned visit time.

02 Host decision

Approve, cancel, reschedule or transfer the request as permitted. An unapproved request does not authorize entry.

03 Arrival verification

Security verifies the guest and appointment. Use QR verification where supported and configured.

04 Pass and check-in

Issue the configured digital or printed pass. Record check-in against the correct site and host.

05 Visit control

Review active visits, coordinate host / escort requirements and manage exceptions using the site procedure.

06 Check-out and report

Verify exit and close the visit. Review remaining open records and generate visitor reports.

04 / CAPABILITIES AND PROJECT BOUNDARIES

Useful functionality, mapped to business roles

Published capabilities enrich the solution design; they are not all confirmed as included in the purchased bundle.

Function family	Reference capability	ADAMA design check
Registration	Pre-registration; self-registration by web, kiosk or mobile; frequent-visitor handling.	Confirm enabled channels and required peripherals.
Host coordination	Visit approvals, modifications and notifications.	Map host permissions and notification delivery prerequisites.
Pass and visitor records	Pass creation, digital badge and visitor access records.	Approve pass fields, identity capture and validity policy.
Site control	Visitor dashboard, escort workflow and material tracking.	Confirm licensed modules, site procedure and operator duties.
Governance	Role-based logins and visitor reports.	Separate location operations from authorized cross-site reporting.

License and integration validation

Confirm what the 30-visitor allowance measures, how the 35-host pool is assigned across sites, and the license term / platform edition. Physical door control, SMS gateways and third-party integrations require specific scope confirmation.

05 / TECHNICAL IMPLEMENTATION APPROACH

Build site rules before enabling entry workflows

Recommended D-TECH implementation checks for a controlled two-location deployment.

Workstream	Micro-level activities and acceptance evidence
Discovery and prerequisites	Record each reception / gate workflow, visitor categories, operating hours, host list, network access and existing PCs. Confirm dependencies and responsibilities.
Application setup	Validate supported server prerequisites, activate the ordered license, define both site records and import a clean host master with unique identifiers.
Roles and workflow	Configure security, reception, host and administrator rights; test approval routing, site selection, rejected requests and correction permissions.
Visit records and passes	Agree mandatory fields, identity-data policy, pass content and visit status transitions. Test a repeat guest, cancelled visit, wrong-site arrival and missed check-out.
Connectivity and recovery	Verify approved remote connectivity, timestamps, notification paths and failure handling. Define backup ownership, retention and a restore test before handover.

Acceptance pack: configuration record, license allocation, scenario results, operator training and an agreed handover checklist.

06 / CUSTOMER VALUE AND SUPPORT

Consistent operations at plant and headquarters

Intended operational benefits, with measures to establish after rollout; no performance improvements are asserted.

For security and reception

A consistent record of arrivals, host approvals and exits, helping teams review visitors still marked on site.

For employee hosts

A structured appointment and approval process that supports advance coordination with the reception desk.

For administration

Location-aware reporting and defined ownership of records, user permissions and operational exceptions.

07 / HANDOVER AND REFERENCE NOTES

A clear basis for rollout and long-term use

Project facts come from the service order; manufacturer material provides capability context.

Handover item	Confirmation required
License and sites	Document edition, term, host / visitor metric, site allocation and activated features.
Operational readiness	Security and reception demonstrate approval, entry, denied entry, repeat visit and exit scenarios at each location.
Information stewardship	Approve record retention, identity-document handling, access review and backup / restore ownership.
Operational measures	Establish baselines for registration time, approval turnaround and open-visit reconciliation; measure after rollout.
