

CLIENT CASE STUDY / MRF DAHEJ

Keeping the plant connected, every day.

Onsite telecom and telephone network support with one dedicated FMS resource.

STARTED 2023

ACTIVE IN 2026

THE SERVICE MODEL

Assess the fault. Restore the connection. Record the action. Keep the support resource available on site.

MRF LIMITED / DAHEJ

A people-led support model for day-to-day telephone and network availability at a manufacturing site.

THE REQUIREMENT

One accountable person at the site

Plant communication depends on many connected components. A local support resource gives users and the IT team a clear point of contact for routine checks and fault handling.

01

Respond locally

Telephone instrument or line issues can be examined at the point of use, avoiding an unclear hand-off between site and remote teams.

02

Support the path

Checks extend from the instrument and outlet through copper or fiber, rack, switch and IPBX / SETU equipment.

03

Keep a record

Daily reporting, call logs and a maintained telephone directory help the plant team track work and plan follow-up.

ENGAGEMENT AT A GLANCE

1 onsite resource

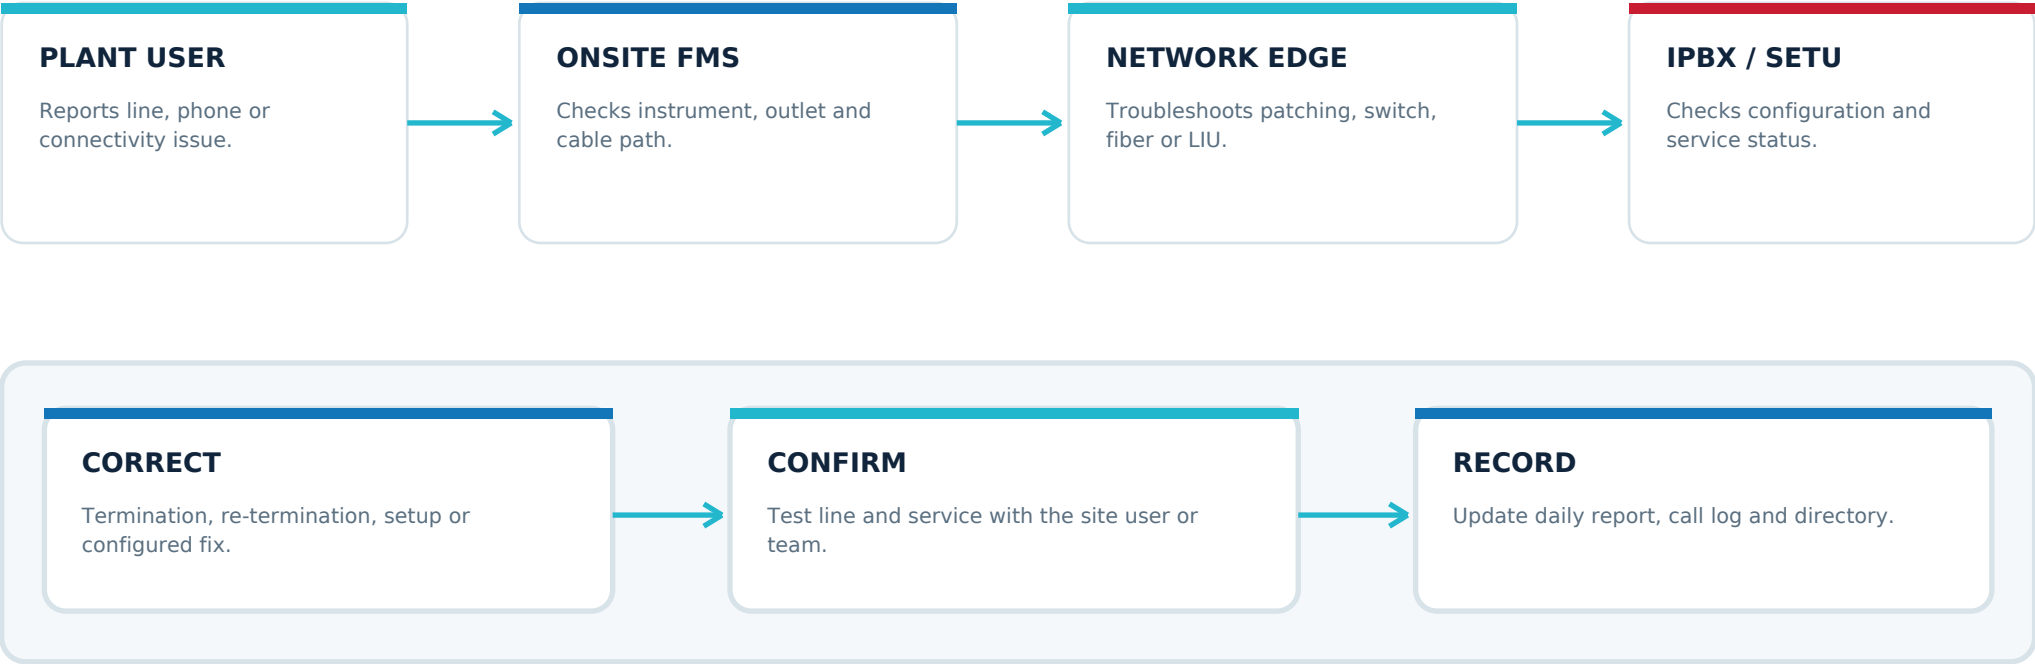

8-hour working day

Telephone + LAN edge support at MRF Dahej

ILLUSTRATIVE SERVICE SCHEMATIC

From a user issue to a documented resolution

The drawing explains the service workflow and supported components. It is a conceptual service map, not the plant network as-built.

Continuity control: arrange cover for long leave; on resignation, replace promptly and hand over to the new resource for two weeks.

SERVICE COVERAGE

A practical operating rhythm

The current service order defines the 2026-27 manpower period and the activities below. Non-comprehensive describes the user-provided support model; this case study does not expand the contractual entitlement.

- 01

ENDPOINT & TELEPHONE
Instrument checks • telephone cable checks • IP phone installation and configuration
- 02

CABLING & TERMINATION
New I/O termination • re-termination • cabling surveys • jack-panel termination
- 03

NETWORK & PLATFORM
Cat6 and fiber fault isolation • fiber LIU • network switches • SETU and IPBX troubleshooting
- 04

CARE & RECORDS
Rack maintenance and dressing • software/configuration work • daily reports • call log • directory

NON-COMPREHENSIVE SERVICE | SPARES, CAPITAL REPLACEMENT AND ADDITIONAL WORK REQUIRE SEPARATE COMMERCIAL REVIEW.

RELATIONSHIP TIMELINE

Service continuity through renewal

D-Tech reports onsite non-comprehensive telecom support beginning in 2023. The supplied 2026 order confirms the current annual service period at MRF Dahej.

DOCUMENT BASIS

MRF Dahej Service Order 2400347489, dated 1 April 2026. It states one support resource for 12 months, 1 April 2026 to 31 March 2027, and lists the service activities. Earlier years and qualitative service outcomes reflect D-Tech account history.
