

Workplace IT continuity. Across GACL operations.

Multi-location AMC & FMS

Gujarat Alkalies and Chemicals Limited

Vadodara CSL • Dahej Complex • Dahej D-II/9

D-TECH’s work-order scope combines onsite L2 desktop and basic network support with hardware AMC service coverage. This case study explains the engagement, responsibilities and service process.

AMC HARDWARE FAMILIES

Dahej service schedule

The engagement | One client, three service areas

Industrial office and plant teams depend on working endpoints and local network access to carry out daily work. GACL’s orders address this need through assigned onsite support at Vadodara and D-II/9, together with a separate hardware AMC and FMS service schedule for the Dahej Complex.

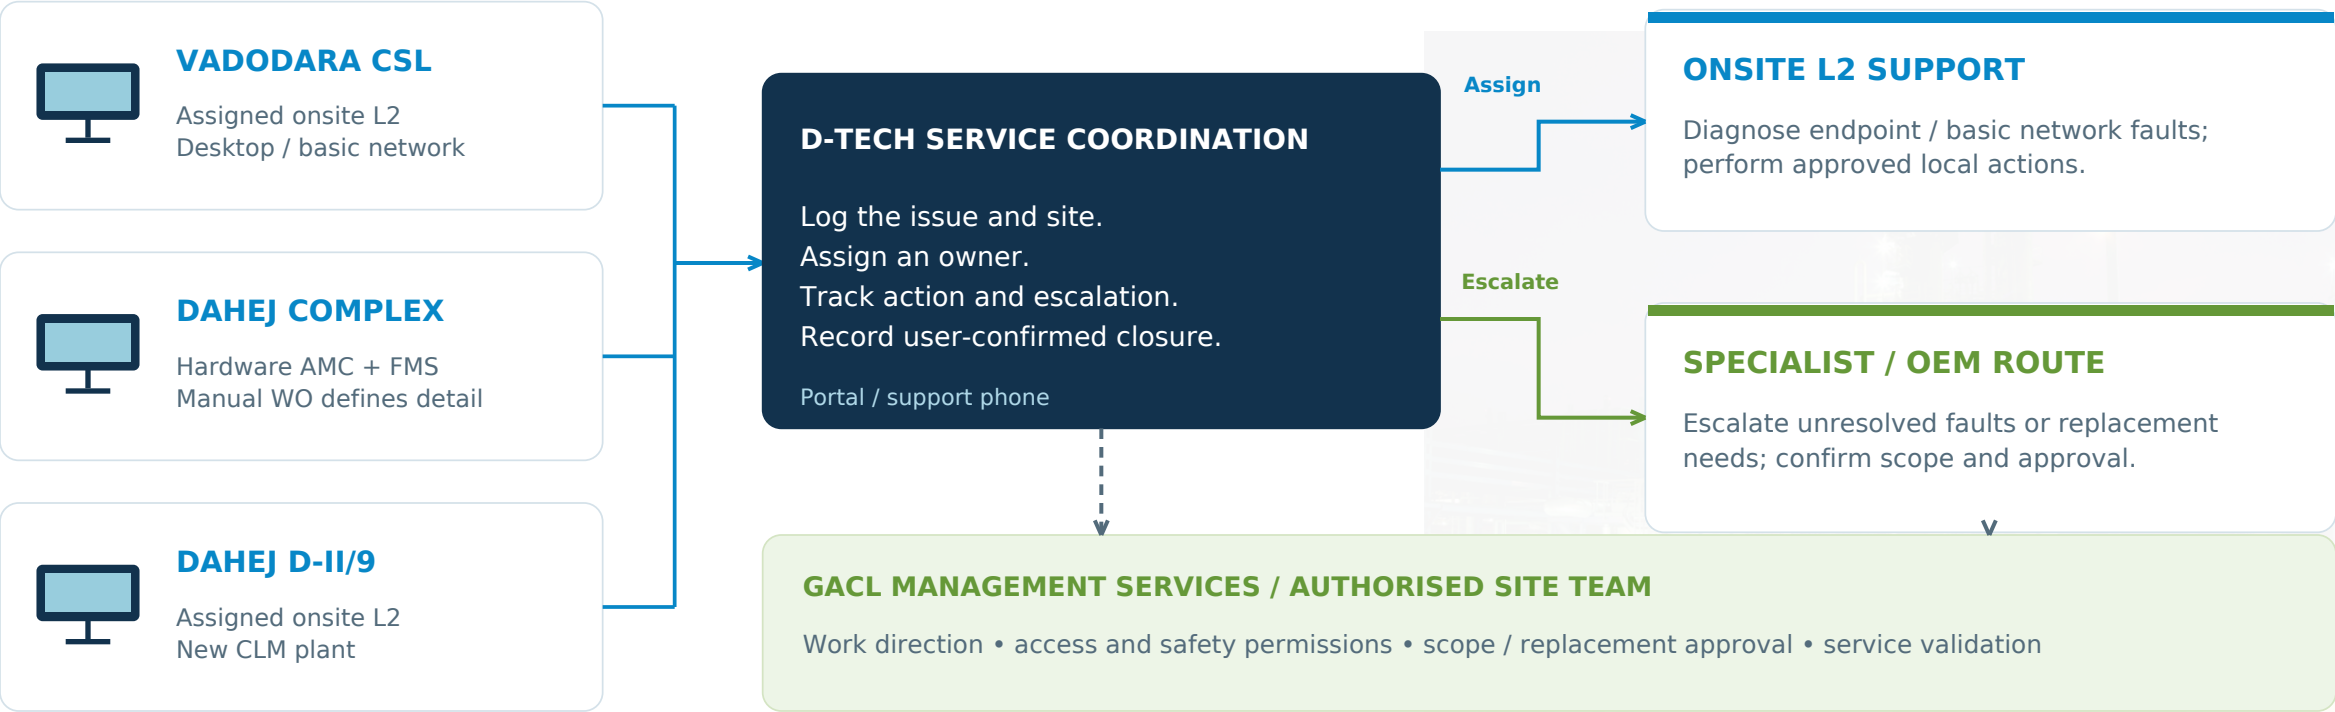

Service area / order	Scope stated in the order	Staffing / contract period
VADODARA CSL WO 3400026082 12 February 2026	L2 desktop and basic network support; Windows OS installation and related assigned maintenance.	1 onsite engineer 12 February 2026 – 11 February 2027
DAHEJ COMPLEX WO 3500029186 12 December 2025	Hardware AMC: desktops, laptops, scanners and printers. Two separately priced FMS Engineer Services lines.	Headcount and service period are not stated in this regularization order; refer to the underlying manual WO.
DAHEJ D-II/9 / NEW CLM WO 3500028672 3 November 2025	L2 desktop and basic network support; Windows OS installation and related assigned maintenance.	1 onsite engineer 1 December 2025 – 30 November 2026

AMC and FMS serve different needs

AMC defines the hardware maintenance service schedule. FMS provides the assigned technical support resource and working arrangements. The Dahej schedule’s NOS quantity is a service-line quantity; it does not establish endpoint counts or engineer headcount.

Service architecture | A coordinated support model

The model below links the ordered site support to a clear complaint, diagnosis, escalation and closure workflow. It is a service-process design, with GACL’s Management Services Department directing the onsite engineers.

Recommended records: ticket ID, site, affected asset, issue, action, approval, engineer, user confirmation and closure time.

Support | Availability, escalation and resolution

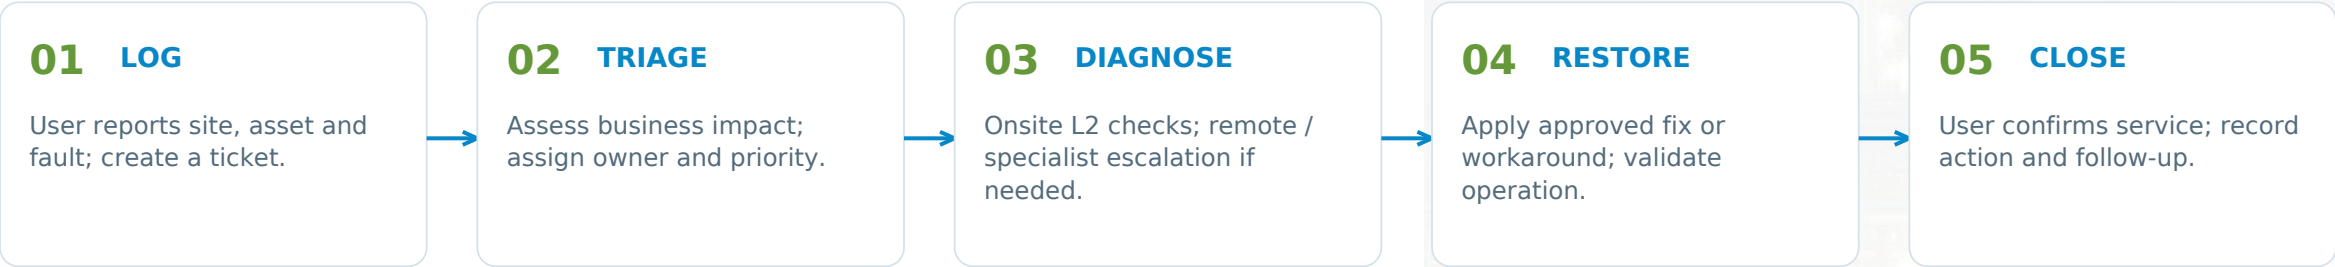

The FMS orders specify support availability and monthly engineer presence. They do not define numeric incident response or restoration targets. Severity-based triage below is a recommended operating practice; any timed SLA needs separate agreement.

ONSITE AVAILABILITY
8 × 6 onsite, Monday–Saturday. Vadodara operates in the shift assigned by GACL.

D-II/9 WORKING HOURS
9:00 AM–5:30 PM, Monday–Saturday, other than GACL holidays.

OFFLINE / EMERGENCY SUPPORT
24 × 7 offline support, as worded in the FMS orders; extended hours / holidays for exigencies.

RECOMMENDED INCIDENT WORKFLOW

IF NOT RESTORED

Escalate to D-TECH coordination / specialist support. Obtain GACL approval for out-of-scope action or replacement; keep the ticket open and the user informed until validation.

Maintenance & governance | Support with accountability

The FMS engineers work under GACL’s Management Services Department. D-TECH remains responsible for its personnel and the employment obligations stated in the orders. A structured operating rhythm makes fault handling, engineer availability and service reporting easier for both teams to review.

REQUIREMENTS IN THE FMS ORDERS

L2 resource with 2-3 years of hands-on desktop / network support experience.
Follow plant safety, security and confidentiality requirements.
Minimum 23 days availability per billing month; pro-rata deduction where deficient.

RECOMMENDED MAINTENANCE PRACTICE

Maintain an approved asset register and incident history.
Schedule endpoint health and printer / scanner checks with GACL.
Use authorised software and approved change windows; confirm AMC exclusions and spares terms before action.

A monthly service review should turn support activity into clear next actions.

01 RESOURCE PRESENCE

Attendance, shift coverage and the 23-day billing requirement.

02 INCIDENT POSITION

Open tickets, impact, ageing, repeat faults and pending approvals.

03 MAINTENANCE ACTIONS

Completed approved checks and asset exceptions requiring attention.

04 SERVICE VALIDATION

GACL review, agreed actions and monthly invoice support.

The maintenance cadence and review pack are recommendations. The supplied orders do not specify a preventive-maintenance frequency.

Order analysis | What the source documents establish

Review point	Finding / implication
Duplicate Dahej file	The two uploaded Dahej AMC PDFs are identical. WO 3500029186 is counted once.
AMC quantity and manpower	NOS quantity 4 on each Dahej line is an accounting / service quantity. An asset register and defined engineer headcount are not provided.
Underlying Dahej terms	The regularization refers to manual WO Ms/WO/3500029186, dated 12 December 2025. That manual order is needed to establish duration, detailed inclusions, spares and service terms.
Availability versus timed SLA	8 x 6 onsite and 24 x 7 offline support are stated in the two FMS orders. Numeric response / restoration targets are not stated in the supplied documents.
Payment wording to reconcile	Vadodara: narrative clause 4 states 15 business days from invoice submission; ERP field states 30 days from invoice date. D-II/9: 15 business days from submission versus 15 days from invoice date. Confirm the applicable wording.
Performance reporting basis	No ticket history, measured uptime, attendance record or signed service-performance report was supplied. The case study describes the ordered engagement and an operating design.

SOURCE REGISTER

Vadodara FMS: WO 3400026082, 12 February 2026 (4 pages).
 Dahej AMC regularization: WO 3500029186, 12 December 2025 (3 pages; duplicate excluded).
 D-II/9 FMS: WO 3500028672, 3 November 2025 (4 pages).
 Commercial rates are not reproduced; this document presents service scope and engagement design.
