

A complete workplace. One turnkey partner.

Aarti Industries Limited Vadodara Office

Networking, surveillance, access control, time attendance, Wi-Fi and PABX brought together through D-TECH's supply, installation and implementation engagement.

800+

Users in the stated office scope

6

Technology domains

TURNKEY

Coordinated delivery responsibility

Project location: Block 4, Keval Corporate Park, Chhani, Vadodara. User scale and broader turnkey scope stated by D-TECH.

The requirement | An office ready for daily operations

Connecting people, security and communication

An office serving 800+ users needs more than isolated devices. Staff require dependable wired and wireless connectivity, security teams need usable camera views and controlled entry, HR needs attendance records, and teams need internal voice communication. These services must fit the same office layout and remain understandable to the client’s operating teams.

D-TECH’s turnkey role

D-TECH describes the Aarti Vadodara office engagement as a complete infrastructure setup covering six technology domains. Dream Space Interiors work orders name D-TECH as the supply and installation contractor for networking and the later Matrix RFID/access-control package at the same Block 4 project.

Inside the case study	Page
Six-domain solution scope	3
Server room, hub rooms and network design	4
Security, access and attendance workflow	5

Client value, project details and reference basis	8

The solution | Six domains, coordinated delivery

Technology domain	Role in the office setup	Delivery focus
Networking	Structured copper and fibre backbone connecting work areas, the server room and hub rooms.	Cable routing, termination, patching, rack dressing and link checks.
CCTV	Surveillance coverage for agreed office locations.	Camera placement, recording setup, viewing access and functional verification.
Access control	Controlled entry with authorised credentials and door-control hardware.	Matrix software, reader/controller setup, RFID permissions and exit-switch operation.
Time attendance	Employee punch records and attendance reporting.	User enrolment, time synchronisation, punch verification and approved attendance rules.
Wi-Fi	Wireless access across agreed work and meeting areas.	Access-point placement, approved SSIDs, access policies and coverage checks.
PABX / voice	Internal calling supported by the office voice infrastructure.	Extension mapping, termination, call tests and user handover.

Documented makes: CommScope / NETCONNECT - structured cabling | NETRACK - racks and wire managers | Matrix COSEC - access software and hardware. Other OEMs are not identified in the supplied records.

The network | A structured backbone for the office

Copper / fibre backbone

Logical relationships shown; device counts and port assignment are not an as-built design.

The recorded network scope

The work order specifies 21,450 m of data Cat6 cable and 13,000 m of voice Cat6 cable, plus 250 m of six-core OM3 fibre. It includes switch termination and cable dressing for one server room and two hub rooms.

These are work-order quantities, not final measured installed lengths. Work-area outlets and users are different counts.

The controls | Entry, attendance and surveillance

AUTHORISED ENTRY

An enrolled employee presents an approved credential. The access application checks the assigned permission before the controlled door releases.

ATTENDANCE CAPTURE

Where assigned to attendance, a valid punch is recorded with employee identity and timestamp for review under the client's approved rules.

CCTV VISIBILITY

Authorised security staff review camera views and recorded footage for agreed locations. Recording duration follows the approved storage policy.

CONTROLLED EXIT

Exit switches support the agreed door-release process. Door hardware and emergency release arrangements require site-specific approval.

Enrol user + assign rules

Present credential

Allow / deny entry

Review events / punches

Matrix order: COSEC CENTRA PLT and ACM licence entries; 1 VEGA FAX terminal; 4 PATH DCCE units; 5 exit switches. Workflow illustrates the broader D-TECH-stated scope; payroll integration is not claimed.

The delivery | From site coordination to handover

A handover the client can operate

The work-order framework calls for testing and commissioning, installation records, warranty certificates, as-built drawings and snag closure. D-TECH's service model brings the client and project teams into these hand-offs so each technology domain has a defined operating and support route.

Process describes delivery responsibilities. The supplied records do not include final acceptance certificates or measured uptime and response-time results.

The installation | Rack organisation and cabling

Full-height rack and horizontal patching

Colour-coded cabling and patch panels

Cable routes and vertical organisation

Wall-mounted distribution cabinets

An infrastructure foundation that can be maintained

The supplied photographs show rack layouts, patching and cable management associated with the office project. Labels, accessible terminations and organised routes help site teams trace connections during changes and troubleshooting.

The value | One delivery route for the workplace

COORDINATED INFRASTRUCTURE

Six technology domains fit one office project, with a common route for supply, installation and client coordination.

WORKPLACE SCALE

D-TECH reports an 800+ user office setup. This is the engagement scale, rather than a count of active sessions or wired outlets.

SERVICEABLE FOUNDATION

Structured cabling, server and hub-room organisation provide a clear foundation for ongoing operation and support.

CLIENT AND DELIVERY PARTNER

Aarti Industries Limited, Block 4, Keval Corporate Park, Chhani, Vadodara. Delivery contractor: D-TECH; work-order issuer: Dream Space Interiors.

Project reference and presentation basis

Networking: DSIPL/WO/03/20-21/22, 26 August 2020, workbook WO / Summary / Annexure / Measurement. RFID and exit switches: DSIPL/WO/07/19-20/037, 14 December 2020. Both name project DSIPL/01/20/86. The broader turnkey scope and 800+ user scale are supplied by D-TECH. Diagrams explain the solution structure; quantities shown are order quantities. No measured performance or final completion date is inferred.

Historical work-order defect-liability and warranty provisions apply to their original terms. A current AMC or renewed coverage requires a separate agreement.
