Complete IT Infrastructure

A turnkey digital foundation for the Indofil Synthesis plant at Dahej

TURNKEY INFRASTRUCTURE

PROJECT PROFILE

Client: Indofil Industries Limited | Location: Dahej, Bharuch, Gujarat

Lead with Trust. Inspire with Vision.

PROJECT AT A GLANCE

One partner for a complete greenfield IT environment

Indofil Industries needed to establish the IT foundation for its new synthesis plant at Dahej. Building on an existing customer relationship, D-TECH surveyed the upcoming facility, engineered the bill of material, competed through an e-auction and delivered the accepted scope within the committed timeframe.

7 domains

Integrated solution areas

1 site

Greenfield plant rollout

1 partner

Turnkey accountability

Business requirement

- Create a complete plant IT environment covering connectivity, compute, communication and collaboration.
- Coordinate multiple infrastructure domains so dependencies were addressed within one project plan.
- Deliver the accepted solution against the committed schedule following a competitive sourcing process.

D-TECH VALUE PROPOSITION

A single accountable integrator across fibre, copper, switching, Wi-Fi, data centre, audio-visual, public-address and server infrastructure—supported by local execution capability.

DESIGNED AS ONE COORDINATED SYSTEM

A multi-domain infrastructure programme

The project brought together the essential layers of plant IT rather than treating each component as a separate purchase or implementation stream.

CONNECTIVITY

Fibre and copper structured networking for the plant's physical communications layer.

NETWORK ACCESS

Network switches and indoor Wi-Fi coverage for wired and wireless connectivity.

CORE & COMPUTE

Data-centre activities and server infrastructure for centralised IT services.

COLLABORATION

AV boardroom design and public-address systems for communication and operations.

Integrated delivery flow

EXECUTION BUILT AROUND CONTINUITY AND CONTROL

Turnkey governance across interdependent workstreams

Because the scope spanned several technology domains, success depended on a coordinated design and a single delivery view. D-TECH’s local presence and prior customer understanding supported planning and execution.

Challenge-to-response matrix

Delivery consideration	D-TECH response
Broad, interdependent scope	Consolidated networking, Wi-Fi, data centre, AV, PA and server requirements into one engineered bill of material.
Competitive e-auction	Balanced commercial competitiveness with a solution capable of meeting the plant requirement.
Greenfield-site coordination	Surveyed the upcoming plant and planned scope before material and execution commitments.
Committed completion window	Managed the accepted scope to completion within the timeframe committed at order acceptance.

Value embedded in the delivery model

SIMPLICITY

One integrator reduced cross-vendor interfaces across seven infrastructure domains.

LOCAL RESPONSE

Bharuch-area delivery capability supported site coordination and follow-through.

LIFECYCLE VIEW

The solution connected physical infrastructure with compute and collaboration needs.

All statements reflect the supplied project record; no modelled ROI or unverified KPI has been added.

FROM INSTALLATION SCOPE TO OPERATIONAL VALUE

A unified IT foundation for plant operations

The completed programme provided Indofil with a coordinated infrastructure base for connectivity, central IT services and workplace communication at the Dahej plant.

TURNKEY COMPLETION

The accepted multi-domain IT infrastructure scope was completed within the committed timeframe.

INTEGRATED ENVIRONMENT

Network, Wi-Fi, data-centre, server, AV and PA components were addressed as one programme.

REDUCED COORDINATION BURDEN

A single solution partner simplified planning and accountability across dependent workstreams.

PLATFORM FOR GROWTH

The resulting infrastructure provides a base for future plant systems, users and digital initiatives.

WHY THIS PROJECT MATTERS

This engagement demonstrates the value of treating greenfield IT as an integrated plant-enablement programme—with one design baseline, one execution structure and one accountable partner.

A foundation designed to be supportable, scalable and ready for the next requirement.
