CASE STUDY / PARTNER-LED CAMC / SERVICE COORDINATION

One support chain. Clear accountability.

Chattary Ajwan Infotech Private Limited

Integrated electronic security CAMC

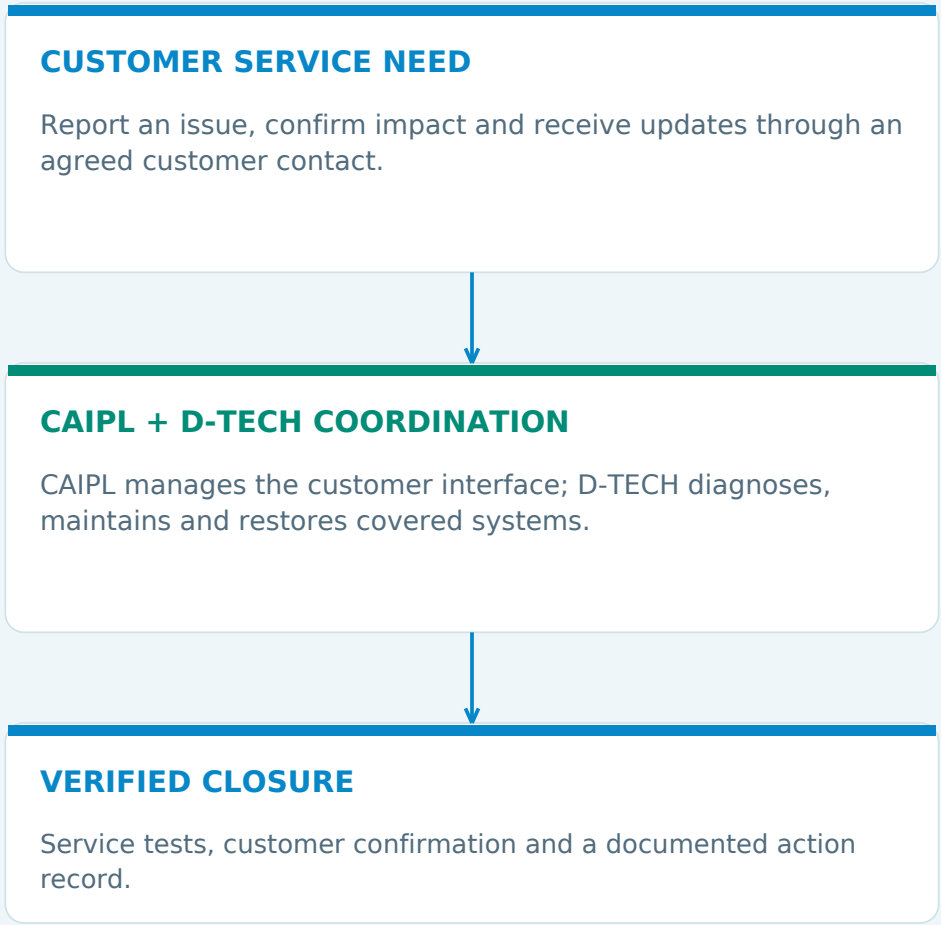

D-TECH technical service, preventive maintenance and coordinated repair support behind CAIPL’s customer-facing delivery model.

CONTRACT VALUE: APPROX. USD 109,489 (INCL. TAX)

8 SERVICE AREAS | QUARTERLY MAINTENANCE

Reference term: 01 April 2023 - 31 March 2025

Service order CAIPL/23-24/30 | 01 April 2023

Partner context | Software expertise with service depth

CAIPL is described in the supplied company profile as a joint venture of Chattary Summations, Ahmedabad, and Ajwan Enterprise, Kuwait, part of the Caesars Group. Its stated capabilities include ERP, business applications, web portals, customer-support systems, customised development and IT consulting, with more than 18 years of application experience. D-TECH's CAMC contribution supports the infrastructure and security systems on which such operations depend.

CUSTOMER WORKING REQUIREMENTS

Users need functioning access devices and communications; security teams need live video and patrol records; IT teams need stable network services and traceable incident ownership.

PARTNER SERVICE MODEL

Route covered service requests to D-TECH with site / asset details, coordinate authorised access, keep CAIPL informed and return verified service records for customer closure.

CAIPL CLIENTELE | AS SUPPLIED IN THE COMPANY PROFILE

GNFC, Bharuch | GSFC, Vadodara | Gujarat Green Revolution Company | Narmada Chematur Petrochemicals, Bharuch | Caesars Pac, Kuwait | Caesar General Trading, Kuwait | Ajwan Trading, Kuwait | Al-Shahran Industries, Kuwait | Multi Media Frontier, Gandhinagar (TVS Group)

The clientele list describes CAIPL's profile; it does not establish D-TECH AMC coverage at each organisation or at overseas sites.

03 Covered systems | 04 Partner operating model | 05 Incident flow & SLA | 06 Preventive maintenance | 07 Handover & customer care.

Covered systems | Diagnose at the service layer

System	Service activity / diagnostic path	Verification record
CCTV cameras	Check image, camera supply, link, connections and the camera-to-recording path.	Live view and sample recording / playback.
Video analytics software	Check authorised services, camera inputs, configured rules and available event records.	Controlled rule test / event observation.
Attendance & door control	Check reader / controller power, connectivity, approved permissions and event transfer.	Authorised / denied entry, safe exit and attendance event.
Guard tour patrolling	Check reader / checkpoint operation, device synchronisation and patrol report availability.	Sample checkpoint and report reconciliation.
PABX intercom	Isolate extension, wiring, port and exchange faults; preserve approved settings.	Internal call, ring and transfer where configured.
Metal detectors	Check supply, status and OEM-authorised diagnostics / settings.	Approved functional test with site security.
X-ray baggage scanner	Coordinate authorised OEM / qualified service; check faults and operational status.	OEM / site-approved acceptance test record.
IT FMS & network	Trace endpoint, power, cable, switching, addressing and service reachability.	Restored network / service access and change record.

Detailed models, asset quantities and installed feature sets are not listed in the contract; the approved asset register controls actual maintenance.

PROPOSED OPERATING MODEL / CUSTOMER -> CAIPL -> D-TECH -> SPECIALIST

Back-to-back delivery | Roles and escalation ownership

CUSTOMER / SITE OWNER

Describe impact; identify the location; authorise access / maintenance windows; validate restored operation.

CAIPL | PARTNER INTERFACE

Confirm contract coverage and customer priorities; route the ticket; coordinate communications and commercial approvals.

D-TECH | TECHNICAL SERVICE

Own diagnostics and corrective coordination; schedule field work; maintain the service action and test record.

APPROVED ACCESS

Named support contacts; authorised remote access; site permits; protected configuration copies and least-privilege permissions.

CONTROLLED CHANGE

Agree repair steps and rollback; identify covered spares; record serial / part details and configuration changes.

SPECIALIST / OEM ESCALATION

Engage authorised expertise for software, specialist screening equipment or unresolved faults; keep CAIPL updated.

Roles operationalise the requested partner-support model. End-customer access, approvals and any additional sites must be defined in the service plan.

Incident flow | Restore service against agreed targets

01 | LOG & ACKNOWLEDGE

Record site, system, asset, symptom and report time. Contract response target: within 4 hours.

02 | TRIAGE & PRIORITISE

Assess impact with CAIPL / site owner; classify critical or non-critical and assign engineer / specialist.

03 | ATTEND & DIAGNOSE

Coordinate remote / onsite work. Contract breakdown attendance: within 24 hours of reporting.

04 | RESTORE

Contract resolution targets: critical within 12 hours; non-critical within 48 hours.

05 | VERIFY & UPDATE

Test affected functions with the site; record results and notify CAIPL of restoration or remaining actions.

06 | CLOSE & PREVENT

Obtain confirmation, close with cause / action / parts details and review recurring incidents.

The targets are contract commitments, not reported achievements. Define clock rules and criticality; a critical case must be planned around the shorter 12-hour resolution target.

Preventive care | Quarterly checks with actionable reports

Control	Contract basis and operating practice
QUARTERLY PM	Schedule preventive maintenance every quarter at mutually agreed times to minimise disruption. Maintain system-specific checklists and detailed reports after every visit.
PRE-VISIT PLANNING	Confirm the covered asset register, open faults, site access and permits. Preserve authorised configurations and agree the test window with the site / CAIPL.
SYSTEM CHECKS	Inspect condition, power, connections, service status and approved functional tests. Route specialist equipment through authorised service methods.
COMPREHENSIVE REPAIR	Contract coverage includes parts, labour, travel, required spares and consumables for listed systems; genuine parts are specified. Document diagnosis, replacement and post-repair results.
EXCLUSIONS & APPROVALS	The contract excludes damage from natural disasters, vandalism, misuse and unauthorised modifications. Additional work outside scope requires separate quotation and approval.
REPORT & FOLLOW-UP	Submit asset status, observations, actions, test results, replaced parts and pending items. Assign owners and due dates; carry recurring faults into the next review.

Suggested review measures: response / restoration timestamps, PM completion, repeat faults and open-action age. Report actual logs; no performance data was supplied.

Customer care | Traceable support and a usable handover

CAIPL | PARTNER DETAILS

Chattary Ajwan Infotech Pvt. Ltd.
Contract address: 6th Floor, A Wing, Nirman Complex, opposite Havmor Restaurant, Navrangpura, Ahmedabad 380009.
Service order: CAIPL/23-24/30, 01 April 2023.

SERVICE HANDOVER PACK

Covered assets / locations; customer and CAIPL escalation contacts; quarterly PM calendar; fault / parts register; authorised configuration copies; SLA timestamps; test reports and open-action ownership.

HOW THE CUSTOMER BENEFITS

A single coordinated support chain reduces handoffs between software, infrastructure and security teams. Planned maintenance exposes developing faults; controlled repair and functional verification give the site a clear basis for accepting service restoration.
