CASE STUDY / JK PAPER / SERVER & COMPUTER INFRASTRUCTURE

Supply with purpose. Deploy with control. Migrate with confidence.

JK Paper Limited
CPM Unit | Fort Songadh

Servers, computers and broader IT products

A coordinated delivery approach covering procurement, installation, approved data transfer, service migration and customer handover.

1 DELL SERVER

POWEREDGE T320 ORDER

15 DESKTOPS

OPTIPLEX 3046MT ORDER

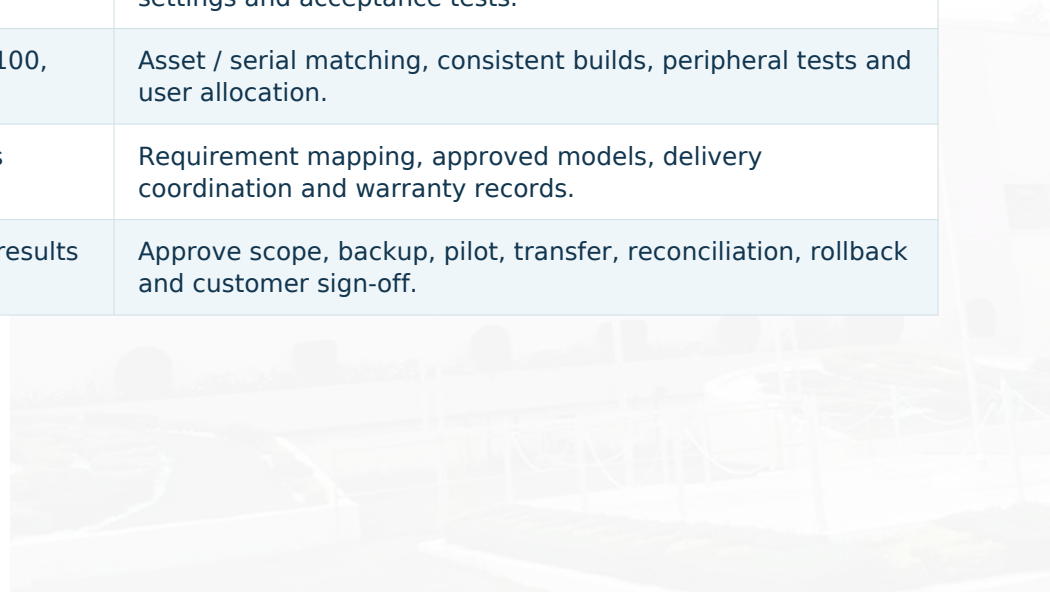

Documented procurement references: 2014 and 2017

Engagement | Server and workplace IT supply

The supplied JK Paper CPM orders establish a Dell server and a 15-desktop procurement scope for Fort Songadh. D-TECH's stated wider engagement includes IT product supply, system installation and migration. The case study presents the documented product baseline alongside a controlled implementation methodology.

Workstream	Source / configuration	Delivery focus
ENTERPRISE SERVER	PO 14000057/B1/13000, 20 May 2014: 1 Dell PowerEdge T320, with an installation service line and OEM support.	Verify hardware, approved OS / service roles, network settings and acceptance tests.
COMPUTER SUPPLY	PO 17000135/OC/13000, 29 July 2017: 15 Dell OptiPlex 3046MT desktops; i3-6100, 4GB RAM, 500GB disk, Windows 10 Pro and 19.5-inch display.	Asset / serial matching, consistent builds, peripheral tests and user allocation.
BROADER IT PRODUCTS	User-described IT product supply relationship; no additional itemised quantities supplied.	Requirement mapping, approved models, delivery coordination and warranty records.
MIGRATION / HANDOVER	Migration described by D-TECH; method, source workloads, cutover dates and results not included in the orders.	Approve scope, backup, pilot, transfer, reconciliation, rollback and customer sign-off.

Contents: 03 Technical baseline | 04 Installation architecture | 05 Migration process | 06 Customer support and handover

Server baseline | Hardware installation and build controls

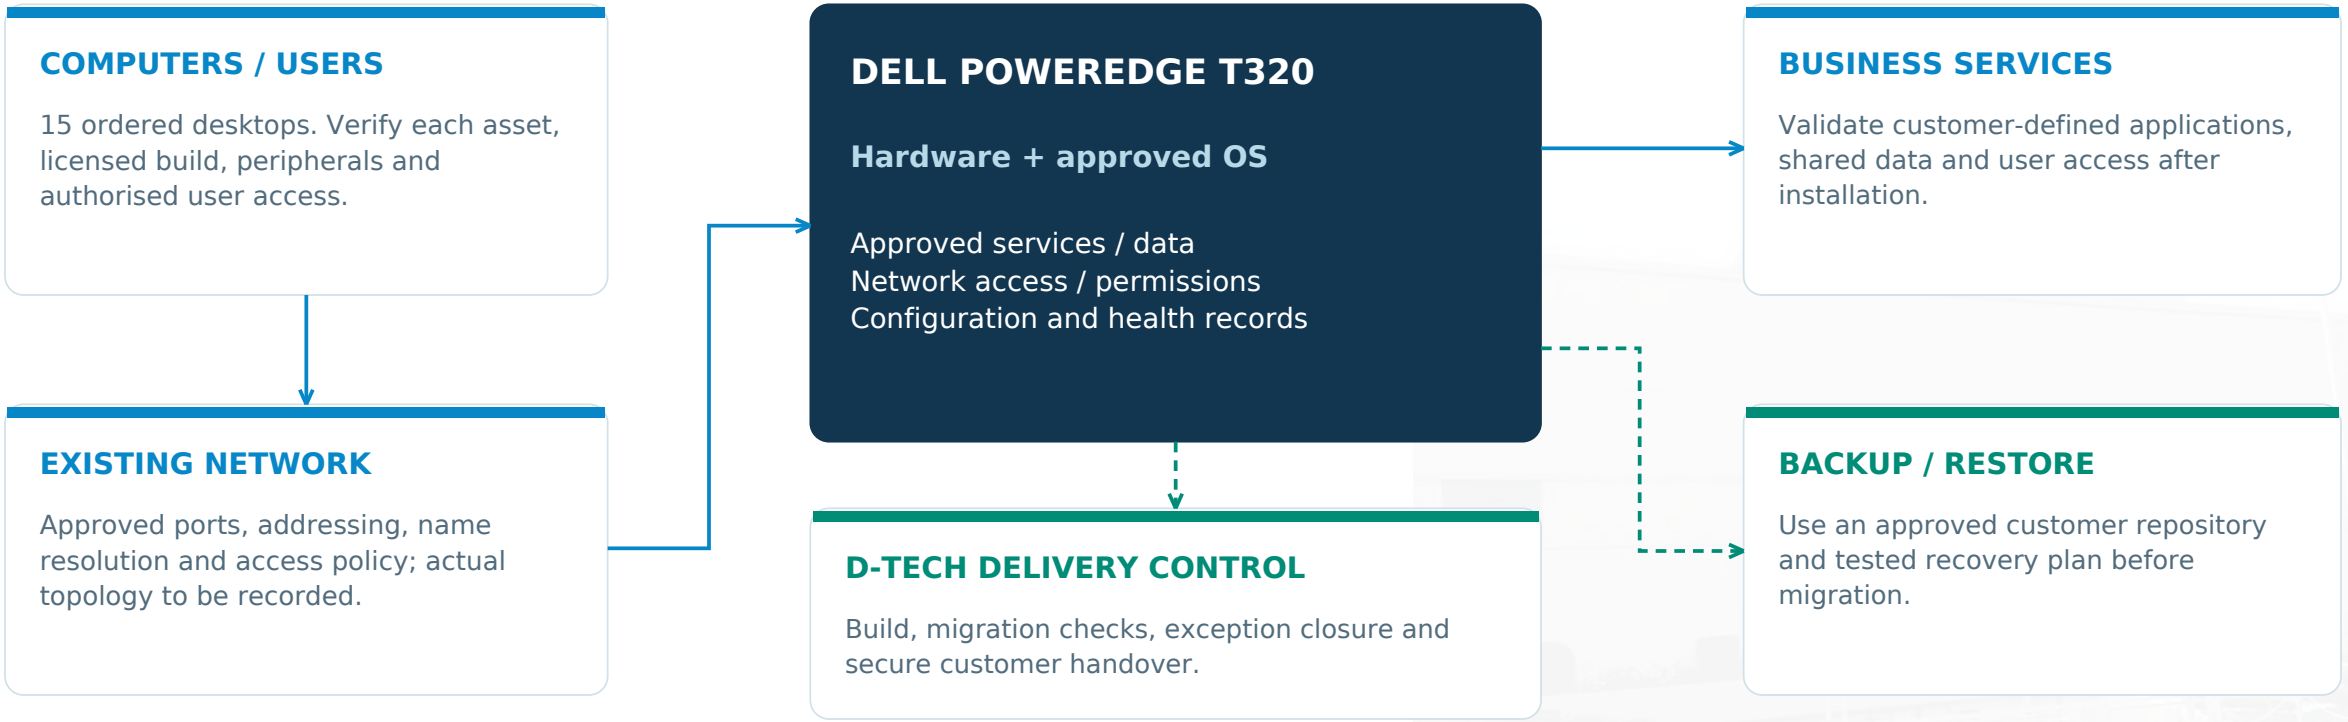

Component	Ordered specification	Installation / verification control
PLATFORM / CPU	Dell PowerEdge T320; Xeon E5-2403, 1.80GHz, 4 cores; 8GB RDIMM 1600MT/s.	Match Service Tag, component labels and diagnostic results; assess capacity against actual workload.
STORAGE	2 x 1TB 7.2K SATA hot-plug disks; PERC H310. Order configuration explicitly states C6 - No RAID.	2TB raw capacity is not verified usable capacity. Do not describe an installed mirror; approve any storage change before initialisation.
POWER / NETWORK	Dual redundant hot-plug 495W supplies; onboard dual-port Broadcom BCM5720 plus additional dual-port 1Gb NIC.	Map power feeds and ports; test hardware health and approved connectivity. Redundancy depends on actual configuration / feeds.
MANAGEMENT / SUPPORT	iDRAC7 Express; installation service; 3-year ProSupport NBD onsite and technical support lines.	Record management access and entitlement. Historical order terms do not establish current warranty or a guaranteed repair duration.

BUILD RECORD BEFORE HANDOVER

Capture firmware, approved OS / licences, hostname, addressing, storage layout, application / service dependencies, access permissions and backup policy. The PO does not identify the server OS, application role or backup solution.

These are historic ordered configurations, not current product recommendations. The desktop OS specification reflects the 2017 order.

Installation architecture | From delivery to usable service

Illustrative relationships only. Application roles, VLANs, backup repository and production dependencies require customer-approved design records.

Migration process | Protect data before service cutover

01 | DISCOVER

Identify source data, services, users, licences, dependencies and agreed outage window.

02 | PROTECT

Back up authorised data / settings; verify recovery and preserve the source baseline.

03 | BUILD / PILOT

Build the approved target; test transfer and application compatibility on a pilot.

04 | TRANSFER

Use the approved method; preserve required permissions and reconcile files / service data.

05 | CUT OVER

Synchronise final changes, switch approved service access and verify representative users.

06 | ACCEPT

Obtain customer sign-off; retain rollback protection until approved release of the old system.

Acceptance gates: file / record reconciliation, required permissions, application behaviour, user access and restore evidence.

Rollback: isolate the failed target and restore the approved source / backup; reconcile intervening changes before returning users to service.

Handover | Products, installation and ongoing support

The combined delivery approach gives the customer a clear link between the supplied asset, its installed configuration and the service it supports. Standard build records, migration checks and signed acceptance make support easier to coordinate without relying on individual engineer memory.

CUSTOMER & SITE

JK Paper Limited | CPM Unit
P.O. Central Pulp Mills, Fort Songadh,
Dist. Tapi, Gujarat 394660.
Server PO: 14000057/B1/13000, 20 May 2014.
Desktop PO: 17000135/OC/13000, 29 July 2017.

ACCEPTANCE & HANDOVER PACK

Delivery / serial register, approved configuration, licences and warranty records, installation tests, user mapping, migration reconciliation, restore evidence, exceptions and customer sign-off.

D-TECH | CUSTOMER SUPPORT

+91 99989 03042

Basis: two supplied JK Paper CPM orders and D-TECH's stated installation / migration scope. Quantities refer to the historical orders.

Completion dates, measured improvements, current support entitlement and migration results require delivery / project records; none are inferred here.
