HINDUSTAN COPPER LIMITED
GUJARAT COPPER PROJECT

FOUR YEARS OF AMC / FMS SERVICE

A continuing relationship. A dependable service focus.

CCTV and IT infrastructure support, backed by resident technical assistance at Gujarat Copper Project, Jhagadia.

4 YEARS
RELATIONSHIP STATED BY D-TECH

LIVE IN 2026
CURRENT SERVICE CONTINUITY

Current LOI: HCL/GCP/600 | 31 May 2026 | Commencement: 01 June 2026

Customer-supplied gate photograph for brand context. Four-year continuity is confirmed by D-TECH.

01 / RELATIONSHIP AND CURRENT ENGAGEMENT

Four years of support. Continuing through 2026.

D-TECH states an ongoing four-year AMC / FMS relationship; the supplied LOI establishes the current engagement.

Engagement element	Documented position
Customer / project	Hindustan Copper Limited - Gujarat Copper Project, 747 GIDC Industrial Area, Jhagadia, Bharuch, Gujarat.
Current award	LOI HCL/GCP/600 dated 31 May 2026; GeM Bid GEM/2026/B/7445468 dated 16 April 2026; NIT 552.
Service scope	Outsourcing of comprehensive AMC of CCTV and IT infrastructure, with monthly charges for a resident engineer of skilled category.
Current term	Twelve months from commencement on 01 June 2026. The detailed scope is governed by the referenced NIT / tender.
Relationship continuity	Four years of AMC / FMS service, continuing in 2026, as stated by D-TECH. Earlier annual orders were not included.

02 / SERVICE INTERACTION ARCHITECTURE

One support route across the customer environment

Reference service model for understanding the engagement; actual asset inventory and network topology follow approved records.

The diagram shows responsibilities and communication, not a new server deployment, CCTV expansion or cross-site connectivity project.

03 / TECHNICAL SERVICE DETAIL

From the reported symptom to the underlying cause

Recommended working checks for agreed in-scope assets. These procedures are not additional contractual promises.

Service area	Micro-level diagnostic and maintenance approach
CCTV and recording	Check affected camera / channel, image availability, power and link condition. Verify recorder status, timestamps and representative playback; record storage or retention exceptions for customer action.
IT endpoint support	Identify the user, asset and symptom. Check hardware condition, operating-system status, approved applications, print / peripheral path and network dependency before selecting corrective action.
Network dependency checks	Inspect patch cords, port indicators, local power and approved IP connectivity. Separate endpoint faults from switching / uplink issues and refer configuration changes for authorization.
Preventive service	Use an approved checklist, inspect connections and equipment condition, document recurring faults, and agree maintenance windows and review frequency with the customer.
Escalation and service records	Capture fault findings, approved action, dependency owners and closure evidence. Coordinate repair / replacement strictly within the executed comprehensive AMC and tender conditions.

Asset counts, camera models, server coverage, retention days, spare obligations and numerical SLA targets are not specified in the supplied two-page LOI.

04 / COMPLAINT-TO-CLOSURE WORKFLOW

A visible service journey for every support request

Response and restoration targets must follow the executed contract / tender; no unverified timings are shown.

01 REGISTER

Capture user, asset, location, symptom and business impact. Give the issue a trackable reference.

02 ASSESS

Resident technical support checks the fault and identifies scope, urgency, dependencies and next action.

03 DIAGNOSE

Inspect the device, power, connection or application path. Record findings and isolate the likely cause.

04 RESOLVE / ESCALATE

Apply an approved remedy or coordinate with D-TECH, customer IT or the relevant OEM.

05 VERIFY

Recheck the affected service. For CCTV faults, verify image and recording / playback where applicable.

06 CLOSE AND REVIEW

Obtain customer confirmation, record action and evidence, and review repeat faults for preventive follow-up.

05 / RESIDENT SUPPORT AND SERVICE GOVERNANCE

Local assistance, supported by clear ownership

The current LOI includes a resident skilled engineer charge across twelve monthly service periods.

AT THE CUSTOMER SITE

Maintain issue visibility, assess faults locally, coordinate access and service visits, and keep the customer informed about pending dependencies.

WITH D-TECH SUPPORT

Escalate technical blockers, coordinate specialist or vendor assistance, and track agreed corrective actions to closure.

WITH CUSTOMER MANAGEMENT

Agree priorities, change windows, permissions and acceptance. Review recurring incidents and outstanding maintenance actions.

Service record	Purpose
Incident and action register	Track issue status, findings, ownership, escalation and customer-confirmed closure.
Maintenance and exception record	Record approved preventive activities, equipment concerns and pending customer decisions.
Periodic service review	Review open calls, repeat faults and preventive follow-up using the agreed reporting cadence.

06 / CUSTOMER VALUE AND ONGOING SERVICE

Long-term support, with continuity at its core

A four-year customer association, continuing in 2026, supported by a current CCTV and IT AMC engagement.

CONTINUITY

A sustained service relationship provides context for understanding customer priorities and recurring support needs.

COORDINATION

Resident assistance and escalation help connect local fault diagnosis with the right technical support route.

ACCOUNTABILITY

Clear issue ownership and customer-confirmed closure make service actions easier to review and explain.

Customer and source basis

Customer: Hindustan Copper Limited, Gujarat Copper Project, Jhagadia. Source: LOI HCL/GCP/600 dated 31 May 2026 and Annexure I. Detailed service scope is referenced to the NIT, which was not supplied.

The four-year relationship and continued service in 2026 are D-TECH-provided facts. The operational diagrams describe the service approach; they do not assert measured uptime, fault-resolution results or additional equipment supply.
