CASE STUDY / GNFC / SERVER MAINTENANCE & SUPPORT

Server care.
Service continuity.
Clear accountability.

Gujarat Narmada Valley Fertilizers & Chemicals Limited

TDI Dahej Project | Dell file server

A structured approach to hardware support, service diagnosis, preventive checks and documented restoration.

DELL T420
HISTORICAL SERVER BASELINE

5-YEAR SUPPORT
ORDERED PARTS + LABOUR

Reference order: 4500039701 | 30 August 2013

Project foundation | Supply, installation and support

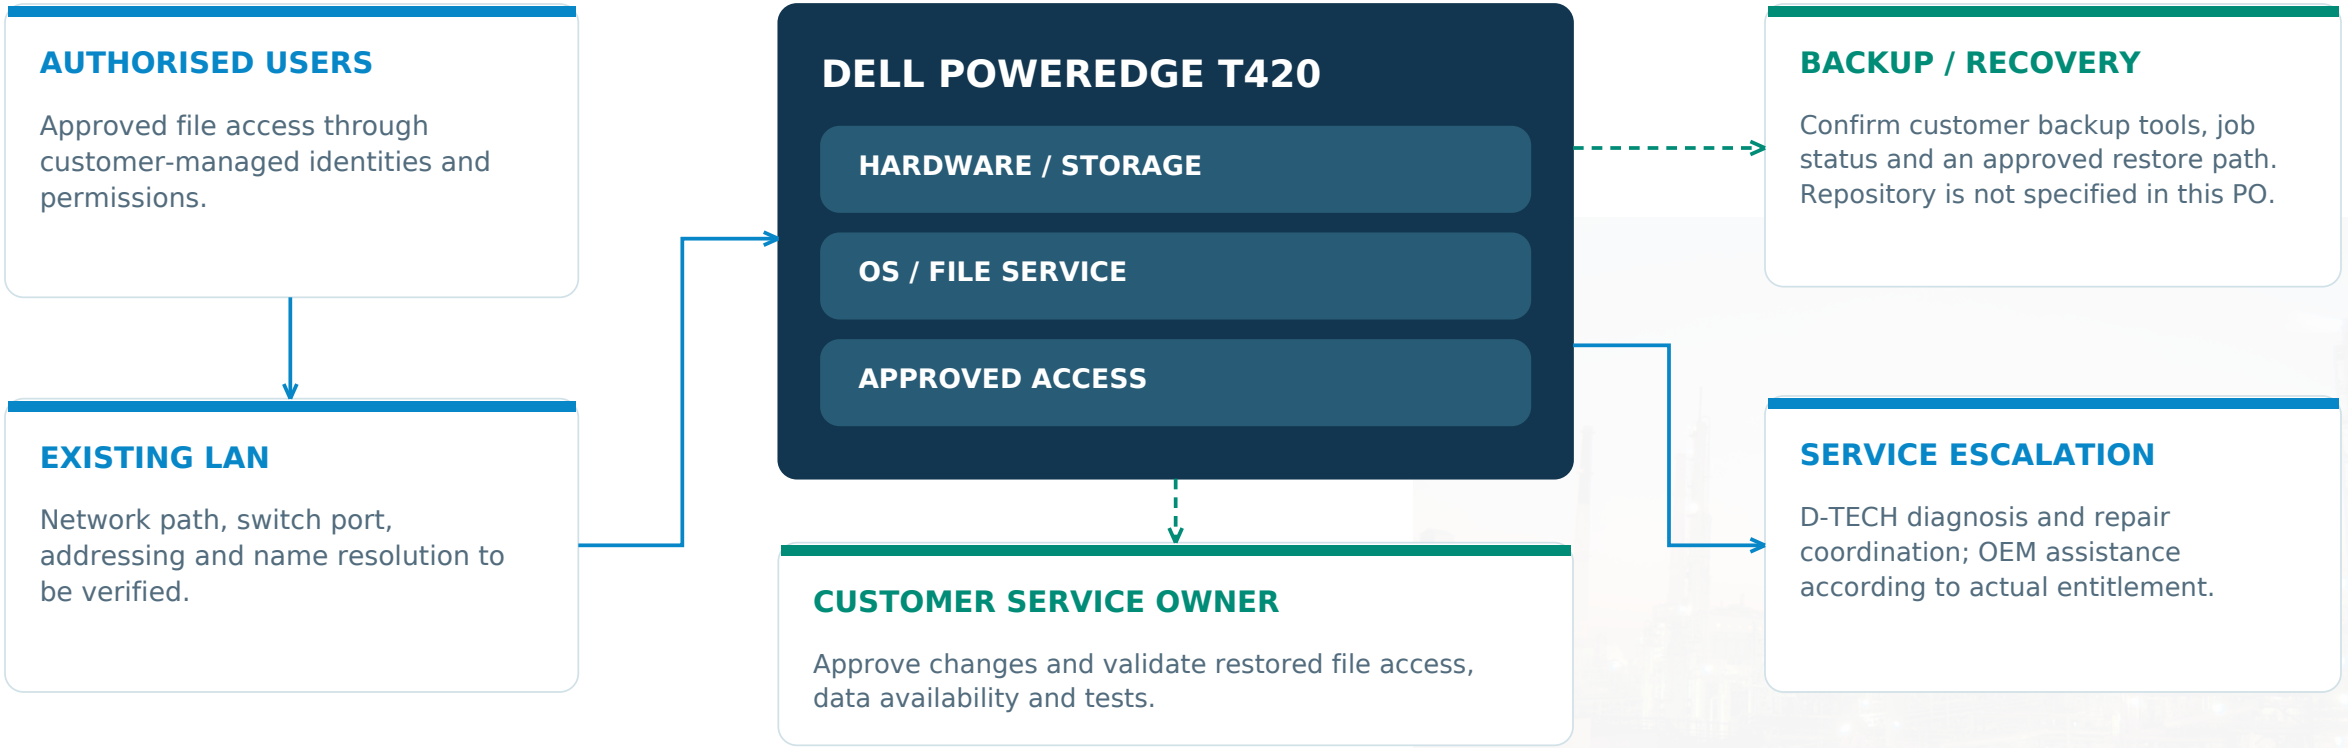

GNFC's TDI Dahej order specifies supply and installation of a 1TB file server using a Dell PowerEdge T420, with five-year comprehensive parts-and-labour warranty and support. This case study connects that documented foundation to a practical server AMC operating model.

Reference	What the source establishes	Support implication
CLIENT / SITE	GNFC TDI Dahej project; Dahej Non-SEZ, GIDC Dahej-II Industrial Estate, P.O. Rahiyad, Taluka Vagra, Bharuch.	Site-based coordination, authorised access and customer acceptance.
SERVER SCOPE	1 Dell PowerEdge T420; order describes a 1TB file server; detailed configuration per quotation.	Confirm live inventory, Service Tag, OS, storage layout and file-service role before maintenance.
DELIVERY / WARRANTY	Supply and installation; GNFC inspection / testing; free vendor installation; five-year parts-and-labour support.	Historical contractual scope; warranty start / expiry and support fulfilment require records.
DOCUMENT BASIS	PO MM/D01/4500039701/TDI/11446 dated 30 August 2013; supplier named M/s D Tech Computers.	No separate current AMC, present entitlement or measured service performance is established.

Contents: 03 Server service architecture | 04 Complaint-to-resolution process | 05 Preventive maintenance, handover and customer support

2D SUPPORT SKETCH / HARDWARE • OS • ACCESS • RECOVERY

Service architecture | Protect the file-service path

Logical support model only. CPU, RAM, RAID, OS version, backup product and live topology were not supplied; 1TB is the source's file-server description.

ILLUSTRATED FLOW / DIAGNOSIS / AUTHORISED CHANGES / CLOSURE

Service response | Fault reporting to validated restoration

01 | REGISTER

Capture asset / Service Tag, symptom, time, affected users and business impact.

02 | TRIAGE

Check power, hardware alerts, storage, OS / file services, network and user access.

03 | PLAN

Agree priority, site access, maintenance window, recovery path and required parts.

04 | RESTORE

Repair under actual cover; recover approved settings / service and escalate as required.

05 | VERIFY

Test hardware health, file access and representative data with the customer owner.

06 | CLOSE

Record cause if known, parts, actions, test results and customer confirmation.

AMC discipline | Preventive care and accountable support

Control	Recommended maintenance evidence
SERVER HEALTH	Review hardware events, storage alerts, component health, capacity and OS / file-service status; capture the baseline and open faults.
CONTROLLED CHANGE	Apply supported firmware / OS changes only under customer approval and a tested rollback plan. Preserve configurations and access ownership.
RECOVERY READINESS	Check backup-job results and agreed retention; perform an authorised representative restore test. Hardware warranty alone does not establish data recovery.
SERVICE RECORDS	Maintain ticket / parts history, configuration register, maintenance checklists and customer sign-off; review repeated faults and ageing risks.
