TRACEABLE RESOLUTION

Service coverage | Complete IT estate, clear boundaries

The customer’s stated environment spans networking, servers, EPABX, time attendance, Wi-Fi, antivirus, backup, internet, Microsoft 365 and user devices. The AMC/FMS case study defines how one onsite engineer coordinates routine support and when D-TECH specialists, OEMs or service providers are engaged.

Coverage area	Support activity	Boundary to agree
NETWORK / INTERNET	Connectivity diagnosis, configuration backup, port checks and ISP escalation.	ISP outages, external circuits, new links and spare equipment.
SERVER / BACKUP	Health / capacity checks, approved maintenance, backup-job review and restore-test coordination.	Application ownership, recovery objectives, licences and replacement parts.
USER / M365 / AV	Device issues, account requests through approval and endpoint-security status checks.	Software subscriptions, authority for account changes and user-data policy.
EPABX / ATTENDANCE	Extension / punch issues, report checks, authorised configuration and OEM coordination.	HR decisions, new devices, application customisation and consumables.
ONE FMS ENGINEER	First-line onsite support, routine checks, ticket updates and documentation.	Shift hours, holidays, relief coverage and after-hours arrangements.

This describes the requested support model. AMC term, price, comprehensive / non-comprehensive cover and signed SLA were not provided.

SERVICE PROCESS DRAWING / USER COMMUNICATION / SPECIALIST ESCALATION

Incident management | Complaint to verified closure

01 | LOG THE ISSUE

Portal / authorised support route. Record asset, location, symptom and business impact.

02 | TRIAGE & ASSIGN

FMS engineer checks impact and urgency, assigns priority and identifies the affected service.

03 | DIAGNOSE

Perform approved checks; record findings and safe workaround where possible.

04 | ESCALATE / RESTORE

D-TECH specialist, OEM or ISP as required. Approve disruptive changes and preserve rollback.

05 | VALIDATE

Test the affected service with the customer; confirm user access and recovery of normal function.

06 | CLOSE & LEARN

Record action, cause if known, timestamps and customer confirmation; track recurring faults.

Raise a support ticket | support.dtechindia.com ↗ | +91 99989 03042

Service discipline | Priority, maintenance and reporting

Priority	Typical impact	Handling rule
P1 | CRITICAL	Agreed critical service unavailable; broad business impact.	Immediate triage within covered hours; escalate to the designated technical owner.
P2 | HIGH	Department or important workflow degraded; limited workaround.	Assign skilled owner; coordinate restoration and customer updates.
P3 | NORMAL	Individual user issue with a workable alternative.	Queue by impact and urgency; retain user communication and closure evidence.
P4 | REQUEST	Planned installation, access change or configuration request.	Obtain approval and schedule the change with documented tests.

DAILY / ROUTINE

Review priority tickets, server alerts, backup results, endpoint protection and repeated connectivity issues.

SCHEDULED PM

Check storage capacity, configuration backups, approved updates, equipment condition and representative restore tests.

MONTHLY REVIEW

Report ticket trends, ageing, repeat faults, PM status, risks, changes and actions requiring customer approval.

Framework only: response / restoration targets, update intervals and maintenance frequency must be agreed. No 24x7 coverage or guaranteed repair time is implied.

Ownership | Customer, onsite engineer and D-TECH

Role	Primary responsibility
CUSTOMER IT / SERVICE OWNER	Approve changes, priorities, access, backup policy and planned outages; validate restored services and maintain business application ownership.
1 ONSITE FMS ENGINEER	First-line support, agreed routine checks, asset records, ticket updates, onsite diagnosis and coordination of specialist work.
D-TECH SPECIALIST TEAM	Advanced troubleshooting in the agreed scope, configuration review, approved changes and technical escalation coordination.
OEM / ISP / SOFTWARE PROVIDER	Provide covered product / circuit support under actual entitlement; track provider references and escalation status.

CUSTOMER & LOCATION

Lewens Labs Pvt. Ltd. | Dahej, Bharuch
Plot D2/CH/376-377, GIDC II, Gujarat.
Scope: stated IT estate and one FMS engineer.

SERVICE HANDOVER PACK

Asset / entitlement register, contact matrix, approved scope, support hours, configuration records, PM plan and open-risk list.

D-TECH customer support | support.dtechindia.com ↗ | +91 99989 03042

Basis: user-specified AMC/FMS scope and infrastructure PO references. Support tenure, service results and contract commitments require the signed AMC records.
